### Artificial Intelligence | An Introduction - GeeksforGeeks

Introduction To Artificial  
 Intelligence  
 And Introduction to  
 Artificial Intelligence.  
 Artificial Intelligence is an  
 ability to design smart  
 machines or to develop  
 self-learning software  
 applications that imitate

the traits of the human  
 mind like reasoning,  
 problem-solving, planning,  
 optimal decision making,  
 sensory perceptions etc.  
 The capacity of artificial  
 intelligent approaches to  
 outperform human  
 actions in terms of  
 knowledge discovery  
 gained the attention of  
 business and research  
 community all over the  
 world and this field of  
 ...Introduction To Artificial  
 Intelligence |  
 Characteristics ...Artificial  
 Intelligence is an  
 approach to make a

computer, a robot, or a  
 product to think how  
 smart human think. AI is a  
 study of how human brain  
 think, learn, decide and  
 work, when it tries to  
 solve  
 problems. Introduction to  
 Artificial Intelligence -  
 Becoming Human  
 ...Artificial Intelligence is a  
 way of making a  
 computer, a computer-  
 controlled robot, or a  
 software think  
 intelligently, in the similar  
 manner the intelligent  
 humans think. AI is  
 accomplished by studying

how human brain thinks, and how humans learn, decide, and work while trying to solve a problem, and then using the outcomes of this study as a basis of developing intelligent software and systems.

Introduction to Artificial Intelligence  
The field of artificial intelligence, or AI, attempts to understand intelligent entities. Thus, one reason

to study it is to learn more about ourselves. But unlike philosophy and psychology, which are also concerned with intelligence, AI strives to build intelligent entities as well as understand them. Another reason to study AI is that these constructed intelligent entities are interesting and useful in their own right.

Introduction to AI: A Modern Approach  
Online Introduction to Artificial Intelligence is based on Stanford CS221, Introduction to Artificial Intelligence. This class introduces students to the basics of Artificial Intelligence, which includes machine learning, probabilistic reasoning, robotics, and natural language processing. The objective of this class is to teach you modern AI.

Introduction to Artificial Intelligence - Class Central  
There is no predefined definition for a Artificial General Intelligence. But in general it should be able to learn, represent knowledge, plan, take decisions under uncertainty, communicate in a natural language and use these skills towards common goal(s) to be AI-complete.
