operational guidance to staff on reserve adequacy discussions in the IMF's bilateral and multilateral surveillance. It is based on the views presented in the policy paper Assessing Reserve Adequacy—Specific Proposals and the related Board discussion. The note addresses key issues related to Staff's advice on the assessment of the adequacy of reserves and related items, including answering the following questions: What is the expected coverage of reserve issues at different stages of the bilateral surveillance process (Policy Note, mission, and Staff Report)? Which reserve adequacy tools best fit different economies based on their financial maturity, economic flexibility, and market access? What do possible reserve needs in mature markets relate to, and how can their adequacy be assessed? How can reserve adequacy discussions for emerging and deepening

financial markets be tailored and applied to better evaluate reserve levels in: (i) commodity-intensive economies; (ii) countries with capital flow management measures (CFMs); and (iii) partially and fully dollarized economies? What reserve adequacy considerations hold for countries with limited access to capital markets? How can metrics for these economies be tailored to evaluate their reserve needs? How should potential drains on reserves be covered? What are the various measures of the cost of reserves for countries with and without market access?

Managerial Economics and Strategy Pearson College Division
With two distinct objectives, this text's approach to managerial economics takes models from recent economics research and

applies the research to the internal structure of a firm. After teaching basic applied economics, the authors look inside the firm and apply this analysis to management decision making. Authors Brickley, Smith, and Zimmerman contend that organizational architecture consists of three aspects of corporate organization: the assignment of decision rights within the company; methods of rewarding individuals; the structure of systems to evaluate the performance of both individuals and business units. These three components can be likened to a stool with three legs. If one of the legs is shorter, the stool is out of balance. These three elements must be in balance in the organization as well.
