Rehabilitation of Pipelines Using Fibre-reinforced Polymer (FRP) Composites presents information on this critical component of industrial and civil infrastructures, also exploring the particular challenges that exist in the monitor and repair of pipeline systems. This book reviews key issues and techniques in this important area, including general issues such as the range of techniques using FRP

composites and how they compare with the use of steel sleeves. In addition, the book discusses particular techniques, such as sleeve repair, patching, and overwrap systems. Reviews key issues and techniques in the use of fiber reinforced polymer (FRP) composites as a flexible and cost-effective means to repair aging, corroded, or damaged pipelines Examines general issues, including the range of techniques using FRP composites and how they compare with the use of steel sleeves Discusses particular techniques such as sleeve repair, patching, and overwrap systems Pipeline Integrity Elsevier

Offshore Pipelines covers the full scope of pipeline development from pipeline designing, installing, and testing to operating. It gathers the authors'

experiences gained through years of designing, installing, testing, and operating submarine pipelines. The aim is to provide engineers and management personnel a guideline to achieve cost-effective management in their offshore and deepwater pipeline development and operations. The book is organized into three parts. Part I presents design practices used in developing submarine oil and gas pipelines and risers. Contents of this part include selection of pipe size, coating, and insulation. Part II provides guidelines for pipeline installations. It focuses on controlling bending stresses and pipe stability during laying pipelines. Part III deals with problems that occur during pipeline operations. Topics covered include pipeline testing and commissioning, flow assurance

engineering, and pigging operations. This book is written primarily for new and experienced engineers and management personnel who work on oil and gas pipelines in offshore and deepwater. It can also be used as a reference for college students of undergraduate and graduate levels in Ocean Engineering, Mechanical Engineering, and Petroleum Engineering. * Pipeline design engineers will learn how to design low-cost pipelines allowing long-term operability and safety. * Pipeline operation engineers and management personnel will learn how to operate their pipeline systems in a cost effective manner. * Deepwater pipelining is a new technology developed in the past ten years and growing quickly. *Environmental Impact Statement*

Fifty years ago, in November 1947,

Brown & Root helped Kerr-McGee build the first out-of-sight-land offshore platform that produced oil. The date is widely celebrated as the birth of the modern offshore industry. In the years since this historic occasion, Brown & Root has continued to pioneer in the design and construction of offshore pipelines and platforms. Along with the rest of the offshore industry, the company has helped develop technology capable of finding and producing oil in deepwater and in harsh environments around the world. This history puts a human face on the process of technological change. Using the words of many of those who took part in Brown & Root's offshore activities, this book recounts their efforts to find practical ways to recover offshore oil. Building on

lessons learned in the Gulf of Mexico before and after World War II, the company's personnel adapted offshore technologies to conditions encountered in Venezuela, the Middle East, Alaska, and other regions before becoming one of the first engineering and construction companies to confront the challenge of North Sea development in the 1960's. Through times of boom and bust in the oil industry, the search for effective technology had continued. The process has not always been smooth, but the results have been impressive. As we enter a new and exciting era in offshore technology, the history of the first fifty years of the industry provides a useful context for understanding current and future events.

The objective of the book is to provide all the elements to evaluate the performance of production availability and reliability of a system, to integrate them and to manage them in its life cycle. By the examples provided (case studies) the main target audience is that of the petroleum industries (where I spent most of my professional years). Although the greatest rigor is applied in the presentation, and justification, concepts, methods and data this book is geared towards the user.

Geislingen, Sprache: Deutsch, Abstract: Das Thema "Feinstaub" ist seit Beginn des Jahres 2005 immer häufiger Auslöser für öffentliche Diskussionen in der Politik, den Medien und der Bevölkerung gewesen. Die Medien berichten regelmäßig über Themen wie Umweltzonen, Überschreitungen der Grenzwerte bei Feinstaub, Straßensperrungen, Durchfahrtsverboten, usw. In der Bevölkerung wurde dadurch eine regelrechte Verunsicherung ausgelöst, da die Kenntnisse über die Entstehung des Feinstaubes, die Wirkung von Feinstaub auf Mensch und Tier, sowie Maßnahmen zur Reduzierung von Feinstaub große Lücken aufweisen. Trotz der frühzeitigen Einführung von Abgasnachbehandlungstechnologien,

Emissions- und Immissionsgrenzwerten und deren laufender Verschärfung besteht insbesondere beim Feinstaub noch weiterer Handlungsbedarf. Das Thema "Feinstaub" wurde in der Vergangenheit eher als kleineres Problem angesehen. Aufgrund aktueller Messungen, Studien und Untersuchungen wird der Feinstaubproblematik heute eine viel höhere Priorität zugesprochen als noch vor ein paar Jahren. Jeder in der Bevölkerung kann seinen Teil zur Feinstaubreduzierung beitragen und nicht immer müssen Maßnahmen mit Kosten verbunden sein. Oft sind schon ein gesunder Menschenverstand und nachhaltige Denkweise die ersten Schritte zu einer Minderung von Problemen. Grundlagen dafür sind

jedoch fachkundige Informationen. Es ist nur möglich Probleme zu beseitigen, wenn die Ursachen dafür bekannt sind. Diese Bachelorthesis hat zum Ziel, über die Entstehung und die Problematik des Feinstaubes zu informieren. Dabei soll gezeigt werden, wie und wo der Feinstaub entsteht, welche Auswirkungen Feinstaub auf den Menschen hat und welche Maßnahmen zur Vermeidung bzw. zur Reduzierung des Feinstaubaufkommens sinnvoll erscheinen und auch wirtschaftlich umsetzbar sind. Diese Bachelorthesis dient als Grundlageninformation über Feinstaub und soll zum Nachdenken anregen.
