Throughout history, many people have escaped to nature either permanently or temporarily to rest and recharge. Richard L. Proenneke, a modern-day Henry David Thoreau, is no exception. Proenneke built a cabin in Twin Lakes, Alaska in 1968 and began thirty years of personal growth, which he spent growing more connected to the wilderness in which he lived. This guide through Proenneke’s memories follows the journey that began with One Man’s Wilderness, which contains some of Proenneke’s journals. It continues the story and reflections of this mountain man and his time in

Alaska. The editor, John Branson, was a longtime friend of Proenneke’s and a park historian. He takes care that Proenneke’s journals from 1974-1980 are kept exactly as the author wrote them. Branson’s footnotes give a background and a new understanding to the reader without detracting from Proenneke’s style. Anyone with an interest in conservation and genuine wilderness narratives will surely enjoy and treasure this book.

If you’ve ever wanted to reload ammunition but didn’t know where to start this book is for you. You’ll find detailed chapters about primers, cartridge cases, gun powder, and bullets, explaining in layman’s terms what they are, variations you’ll encounter and the characteristics of each. You’ll also learn the different facets of case preparation: which are necessary and which are optional, and how to do them. You’ll learn some characteristics of gunpowder and which types work best with bulk measurements. There’ll be detailed photos and explanations teaching the process of reloading ammunition. From there you’ll be shown how you can gear up to reload your own ammunition even if you don’t have much money or space. Although most of the book is geared toward metallic cartridge reloading there’s also a chapter on reloading shotgun ammunition. It too, will show you the steps involved and how to become operational with very little money and minimal space requirements. After reading this book the novice reloader will: (a) be capable of making informed choices when purchasing their equipment and components; (b) be able to understand the reloading process and why certain steps are taken or omitted; (c) have a safe, profitable and enjoyable experience from the very beginning.

"To live in a pristine land, unchanged by man; to roam a wilderness through which few other humans pass; to choose an idyllic site, cut trees and build a log cabin; to be a self-sufficient craftsman, making what is needed from materials available; to be not at odds with thye world, but content with one’s own thoughts and company. Thousands have had such dreams but Richard Proenneke lived them. He found a place, built a cabin and stayed to become part of the country. [This] is a simple account of the day-to-day explorations and activities he carried out alone and the constant chain of nature’s events that kept him company"--Publisher’s description.

*Cartridge Reloading in the Twenty-First Century* Pickle Partners Publishing

Illustrated Edition of 1959 in Facsimile. This is the first edition of one of the classic descriptions of wildcat cartridges, first published in 1949. Though revised and updated in 1962, this is Ackley’s first effort at tackling the loading data, theory, and practice of wildcat cartridges. A wildcat cartridge, often shortened to wildcat, is a custom cartridge for which ammunition and/or firearms are not mass-produced. These cartridges are often created in order to optimize a certain performance characteristic (such as the power, size, or efficiency) of an existing commercial cartridge. Developing and using wildcat cartridges does not generally serve a purpose in military or law enforcement; it is more a hobby for serious shooting, hunting, gunsmithing and handloading enthusiasts, particularly in the United States.

A comprehensive guide to modern cartridge reloading, Cartridge Reloading in the Twenty-First

Century provides detailed information about getting started in reloading, selecting the basic tools needed, and choosing your components as well as step-by-step instructions for reloading rifle and handgun cartridges and how to test your loads at the range. The text is supplemented by more than one hundred detailed photographs that illustrate the various types of reloading equipment available and provide guidance in performing the actions that result in a handloaded cartridge. Cartridge Reloading in the Twenty-First Century covers many common problems the handloader may experience, provides unique information about reloading the .50 caliber BMG, and highlights the changes between reloading in the twenty-first century and reloading in the mid-twentieth century. Not only for beginners, Cartridge Reloading in the Twenty-First Century offers advanced reloading information that describes special reloading tools as well as techniques for improving the accuracy of your handloads. The content of Cartridge Reloading in the Twenty-First Century will appeal to both someone considering reloading rifle or handgun cartridges as well as a person who already has acquired some experience in cartridge reloading.

A comprehensive account of the physical / mechanical behaviour of polyurethanes (PU's) elastomers, films and blends of variable crystallinity. Aspects covered include the elasticity and inelasticity of amorphous to crystalline PUs, in relation to their sensitivity to chemical and physical structure. A study is made of how aspects of the constitutive responses of PUs vary with composition: the polyaddition procedure, the hard segment, soft segment and chain extender (diols and diamines) are varied systematically in a large number of systems of model and novel crosslinked and thermoplastic PUs. Results will be related to: microstructural changes, on the basis of evidence from x-ray scattering (SAXS and WAXS), and also dynamic mechanical analyses (DMA), differential scanning calorimetry (DSC) and IR dichroism. Inelastic effects will be investigated also by including quantitative correlations between the magnitude of the Mullins effect and the fractional energy dissipation by hysteresis under cyclic straining, giving common relations approached by all the materials studied. A major structural feature explored is the relationship between the nature of

the hard segment (crystallising or not) and that of the soft segments. Crystallinity has been sometimes observed in the commercial PUs hard phase but this is usually limited to only a few percent for most hard segment structures when solidified from the melt. One particular diisocyanate, 4,4'-dibenzyl diisocyanate (DBDI) that, in the presence of suitable chain extenders (diols or diamines), gives rise to significant degrees of crystallinity [i-iii] and this is included in the present work. Understanding the reaction pathways involved, in resolving the subtle morphological evolution at the nanometre level, and capturing mathematically the complex, large-deformation nonlinear viscoelastic mechanical behaviour are assumed to bring new important insights in the world basic research in polyurethanes and towards applied industrial research in this area.

Includes the Aerial Warfare In Europe During World War II illustrations pack with over 180 maps, plans, and photos. Gen Henry H. "Hap." Arnold, US Army Air Forces (AAF) Chief of Staff during World War II, maintained diaries for his several journeys to various meetings and conferences throughout the conflict. Volume 1 introduces Hap Arnold, the setting for five of his journeys, the diaries he kept, and evaluations of those journeys and their consequences. General Arnold's travels brought him into strategy meetings and personal conversations with virtually all leaders of Allied forces as well as many AAF troops around the world. He recorded his impressions, feelings, and expectations in his diaries. Maj Gen John W. Huston, USAF, retired, has captured the essence of Henry H. Hap Arnold—the man, the officer, the AAF chief, and his mission. Volume 2 encompasses General Arnold's final seven journeys and the diaries he kept therein.
