Drools is Rule Engine or a Production Rule System that uses the rule-based approach to implement and Expert System. Expert Systems are knowledge-based systems that use knowledge representation to process acquired knowledge into a knowledge base that can be used for

reasoning.

Drools

Documentation - JBoss

Drools is a business rule management system with a forward-chaining and backward-chaining inference based rules engine, allowing fast and reliable evaluation of business rules and complex event processing. A rule engine is also a fundamental building block to create an expert system which, in artificial intelligence, is a computer

system that emulates the decision-making ability of a human expert.

JBoss Tools - Documentation

Overview

Drools is a Business Rules Management System (BRMS) solution. It provides a core Business Rules Engine (BRE), a web authoring and rules management application (Drools Workbench), full runtime support for Decision Model and Notation

(DMN) models at Conformance level 3 and an Eclipse IDE plugin for core development.

Drools - Introduction

- Tutorialspoint

It is better to start with sample rules excel generated using Eclipse Drools Plugin. It gives many things already set up. Just change the data inside and use decision tables excel for your program. In this Drools Decision Table Tutorial, same

method is used for Drools 6.4 [Drools Documentation](#) Professional services for drools by Red Hat. Red Hat sponsors this Open Source project and employs its core developers. Additionally, Red Hat offers subscriptions for a fully supported product, Red Hat Decision Manager, based on Drools.
