The New York Times bestseller that gives readers a paradigm-shattering new way to think about motivation from the author of *When: The Scientific Secrets of Perfect Timing* Most people believe that the best way to motivate is with rewards like money—the carrot-and-stick approach. That's a mistake, says Daniel H. Pink (author of *To Sell Is Human: The Surprising Truth About Motivating Others*). In this provocative and

persuasive new book, he asserts that the secret to high performance and satisfaction—at work, at school, and at home—is the deeply human need to direct our own lives, to learn and create new things, and to do better by ourselves and our world. Drawing on four decades of scientific research on human motivation, Pink exposes the mismatch between what science knows and what business does—and how that affects every aspect of life. He examines the three elements of true motivation—autonomy, mastery, and purpose—and offers smart and surprising techniques for putting these into action in a unique book that will change how we think and transform how we live. Research in Education Taylor & Francis
The book is packed with strategies the

reader can use to navigate the assortment of career transitions that individuals' experience across the life-span.

'The book gives a comprehensive overview of what research and the research experience encompass....This book makes an interesting read for everyone who has carried out qualitative research or is planning to do so in the future. It is well-written, and very clearly structured' - Social Research Association

Brian Roberts takes the researcher through the research process, answering the practical and subjective questions anyone will face: - entering the field and finding the right research topic - emotional and identity issues of research - overcoming writing and research 'blocks' - getting your

research into reports, articles and books - reactions to research and how to handle experiences of rejection - and the questions every researcher should ask: What do I get from research, and what next? Loaded with advice on everything from organizing interpretations to coping with stress, this book is a must-read for students of all levels across the social sciences who are about to enter the research field.
