A Course of Lectures Springer Science & Business Media

The motivation for this volume in the History and Theory of Psychology series is to look across sub-disciplines within psychology and highlight instances where researchers transcended the tendency to think about methodology along traditional lines. Contributors have located examples of researchers who built upon existing ideas to create methods true to their interests and theoretical convictions. *Emerging Methods in Psychology* shows how a discipline creates new methods and carves out possibilities that not only generate data, but also advance knowledge of human psychological functioning. It concentrates on showcasing the possibilities that exist when the researcher focuses on the relationship between theory, method, and data. The question of what kind of expertise is required is a

key issue. This is particularly the case in psychology where the tradition of standardizing methods over the last century has served to stabilize research questions. Knowledge creation is deeply affective and ambiguous rather than the secure accumulation of data by a socially legitimized procedure. This innovative volume moves beyond psychology as social engineering into new varieties of social knowledge.

Culture and Psychology Routledge

The role of culture is significant when measuring cognitive abilities during neuropsychological assessments. However, cultural diversity is a frequently overlooked moderating variable. The International Handbook of Cross-Cultural Neuropsychology emphasizes major distinctions among cultural groups in North and South America, Europe, Africa, Asia, and Australia to heighten awareness of nuances, as well as culturally-influenced differences and similarities. The goal of this important handbook is to view assessments and rehabilitation from different perspectives, thereby offering opportunities for increasing knowledge and understanding, while improving clinical skills and laying the groundwork for establishing international and cross-culture collaborations. Clinical judgment can be colored by previous experiences from different cultures, expectancy rates of pathology among certain groups, and differences in socioeconomic levels. As clinical experiences increase with people from different cultures, the limitations of neuropsychological tools to make accurate assessments become evident. It is through gaining knowledge about the values of a different culture that neuropsychologists can develop a cross-cultural understanding. Professionals in areas such as neuropsychology, cross-cultural psychology, and social psychology, to name a few, will find the material in this volume to be a stimulating addition to existing literature.

Culture and Psychology Morgan Kaufmann

What do young people do with the novels they read, the films they see, the music they hear and sing? How do these cultural

products act as 'symbolic resources' in the process of development? And what can we, as researchers, learn by studying people's uses of fiction? This monograph approaches development through the study of transitions and the processes of exploration that follow ruptures in people's lives. Specifically, it examines young people's symbolic responsibility as they have to choose among the wide range of cultural products societies exposes them to. The book thus examines the books, films and music that young people mobilize when they need to redefine their identity, learn informal know-how, or have to confer meaning to what happens to them in transitions. The book has a theoretical scope. It draws on cultural psychology and psychoanalysis to formulate the importance of semiotic mediation in thinking, feeling and acting. Its main contribution is to propose a model for analyzing uses of symbolic resources, such as books and films, in everyday life. It thus shows how uses of symbolic resources can enable new forms of experiences and conduct. It finally highlights social and personal conditions that might facilitate or hinder developmental uses of symbolic resources. The book, based on in-depth case studies, is addressed to scholars, professional and students in the fields of youth, culture and the media, cultural and developmental psychology, and life-long education.

In short, *Culture in Minds and Societies: Foundations of Cultural Psychology* presents a new look at the relationship between people and society, produces a semiotic theory of cultural psychology and provides a dynamic treatment of culture in human lives. This book makes a decisive break from the post-modernist theoretical framework that considers knowledge as

local and situation-specific. It restores the goal of construction of general knowledge to the social sciences. While recognizing the uniqueness of all human personal experience from birth to death, it emphasizes the universality of cultural organization of human minds and societies.

Thinking Through Cultures SAGE Publications India

The unprecedented economic growth in many East Asian societies in the few past decades have placed the region center stage, and increasing globalization has made East-West cultural understanding of even greater importance today. The Psychological and Cultural Foundations of East Asian Cognition is one of the most comprehensive volumes on East Asian cognition and thinking styles to date, and is one of the first to bring together a large body of empirical research on naïve dialecticism and analytic/holistic thinking theories stemming from Richard Nisbett's highly influential *The Geography of Thought*. Edited by Julie Spencer-Rodgers and Kaiping Peng, *The Psychological and Cultural Foundations of East Asian Cognition* expertly examines the psychological, philosophical, and cultural underpinnings and consequences of these thinking theories for human thought, emotion, and behavior. In the past couple of decades, research on this topic has flourished, and East-West cultural differences have been documented in almost all aspects of the human condition, from the manner in which people reason and make decisions, conceptualize themselves and those around them, to how they cope with stress and mental illness, and interact with others, including romantic partners and social groups. Contributions to this volume cover such fascinating and diverse topics as cultural neuroscience and the brain, lifespan development, attitudes and group perception, romantic relationships, the adoption of foreign mindsets and perspectives, creativity, emotion, the self-concept, racial and ethnic identity,

psychopathology, and coping processes and wellbeing. Further, the research featured within this volume has practical implications for business and organizational management, international relations and politics, education, and clinical and counseling psychology, and may be of particular interest to business professionals, managers in government and non-profit sectors, as well as educators and clinicians working with East Asians and Americans of East Asian descent.
