 From executives complaining that their teams don't contribute ideas to employees giving up because their input isn't valued--company culture is the culprit. *Courageous Cultures* provides a road map to build a high-performance, high-engagement culture around sharing ideas, solving problems, and rewarding contributions from all levels. Many leaders are convinced they have an open environment that encourages employees to speak up and are shocked when they learn that employees are holding back. Employees

have ideas and want to be heard. Leadership wants to hear them. Too often, however, employees and leaders both feel that no one cares about making things better. The disconnect typically only widens over time, with both sides becoming more firmly entrenched in their viewpoints. Becoming a courageous culture means building teams of microinnovators, problem solvers, and customer advocates working together. In our world of rapid change, a courageous culture is your competitive advantage. It ensures that your company is "sticky" for both customers and employees. In *Courageous Cultures*, you'll learn practical tools that help you: Learn the difference between microinnovators, problem

solvers, and customer advocates and how they work together. See how the latest research conducted by the authors confirms why organizations struggle when it comes to creating strong cultures where employees are encouraged to contribute their best thinking. Learn proven models and tools that leaders can apply throughout all levels of the organization, to reengage and motivate employees. Understand best practices from companies around the world and learn how to apply these strategies and techniques in your own organization. This book provides you with the practical tools to uncover, leverage, and scale the best ideas from every level of your organization.

Department of the Army Pamphlet John Benjamins Publishing

Focused on fully discussing what is considered to be "good" research, Research and Evaluation in Education and Psychology explains quantitative, qualitative, and mixed methods, and incorporates the viewpoints of various research paradigms into its descriptions of these methods. The work covers four major paradigms: postpositivist, constructivist, transformative, and pragmatic. Special emphasis is provided on conducting research in culturally complex communities, based on the perspectives of feminists, ethnic/racial minorities, and people with disabilities. In each chapter, Donna M. Mertens carefully explains a step of the research process, from the literature review to analysis and reporting. Additionally, she includes a sample study and abstract in each chapter to illustrate the concepts discussed in that section of the book. Now in its third edition, Research and Evaluation in Education and Psychology is perfect as a core text for research courses in departments of education, psychology, and sociology, as well as social work and other human services disciplines. It can be used by itself or in conjunction with other texts focusing on specific methodologies.

This volume is a collection of 13 chapters, each devoted to a particular issue that is crucial to our understanding of the way learners acquire, learn, and use an L2 sound system. In addition, it spans both theory and application in L2 phonology. The book is divided into three parts, with each section unified by broad thematic content: Part I, "Theoretical Issues and Frameworks in L2 Phonology," lays the groundwork for examining L2 phonological acquisition. Part II, "Second Language Speech Perception and Production," examines these two aspects of L2 speech in more detail. Finally, Part III, "Technology, Training, and Curriculum," bridges the gap between theory and practice. Each chapter examines theoretical frameworks, major research findings (both classic and recent), methodological issues and choices for conducting research in a particular area of L2 phonology, and major implications of the research findings for more general models of language acquisition and/or pedagogy.

This book presents research and developments in the virtual, augmented technology and mixed-reality used in language learning and teaching. It provides the readers with a comprehensive overview of contextual language learning with the support of immersive technology. From theoretical foundations, methodological issues, the features of virtual and augmented reality, and educational practices of language learning, to the future of immersive technology for and research on language learning. During the past two decades, abundant research on different realities has recognized the potential of language learning in virtual, augmented, and mixed-reality environments (Wang et al., 2020; Lin & Lan, 2015). Given insufficient studies of Chinese learning in immersive contexts reported in existing literature, this book includes several excellent studies about using immersive technologies for Chinese

learning in addition to other foreign language learning, such as English as a foreign language (EFL). Since learning Chinese has grown significantly as a global trend, the authors vitally consolidate and synthesize various theoretical foundations, visions, and recent research and practices in the context of Chinese teaching from broader and more diverse perspectives. On the other hand, the chapters about EFL learning also shed light on the research on contextual language learning. Thus, the chapters included in this book will likely provide readers with a deep and extensive understanding of the potential of the smart combination of immersive technologies and language learning. More issues for future research will undoubtedly be inspired by reading the chapters in this book.

Serious degradation mechanisms can severely reduce the service life of concrete structures: steel reinforcement can corrode, cement matrix can be attacked, and even aggregates can show detrimental processes. Therefore, it is important to understand how damage can occur to concrete structures and to appreciate the timing of the actions leading to damage. Damage to Concrete Structures summarizes the state-of-the-art information on the degradation of concrete structures, and gives a clear and comprehensive overview of what can go wrong. Offering a logical flow, the chapters are ordered according to the chronological timing of the actions leading to concrete damage. The author explains the different actions or mechanisms in a fundamental manner, without too many physical or

chemical details, to provide greater clarity and readability. The book describes the different causes of damage to concrete, including inappropriate design, errors during execution, mechanisms occurring during hardening of concrete, and actions or degradation mechanisms during service life (hardened concrete). The degradation mechanisms are illustrated with numerous real-world examples and many drawings and photographs taken of actual structures. Written as a textbook for students as well as a reference for professionals, this easy-to-comprehend book gives readers a deeper understanding of the damage that can occur to concrete during the construction process and service.

Liveness is a persistent and much-debated concept in media studies. Until recently, it was associated primarily with broadcast media, and television in particular.

However, the emergence of social media has brought new forms of liveness into effect. These forms challenge common assumptions about and perspectives on liveness, provoking a revisiting of the concept. In this book, Karin van Es develops a comprehensive understanding of liveness today, and clarifies the stakes surrounding the category of the live. She argues that liveness is the product of a dynamic interaction between media institutions, technologies and users. In doing so, she challenges earlier conceptions of the notion, which tended to focus on either one of these contributors to its construction. By analyzing the live in four different cases a live streaming platform, an online music collaboration website, an example of social TV, and a social networking site van Es explores the operation of the category and pinpoints the conditions under which it comes into being. The analysis is the starting point for a broader reflection on the relation between broadcast and social media.
