Emergency care is improving throughout the world and thousands of lives are being saved each year. However, there are still too many patients who die before help reaches them in the form of advanced rescue and definitive emergency care techniques. In an effort to improve emergency care throughout the world, the International Committee of Emergency and Disaster Medicine meets bi annually. This meeting takes place in Mainz, Germany in September in order to discuss issues, exchange information, and establish recommendations designed to improve emergency care. The group is independent of political, national, racial, religious, or commercial influences and, in this sense, similar to the Club of Rome which attempts advances in sociology, biology and natural sciences. Therefore, the organization could be called the "Club of Mainz" for the field of emergency and disaster medicine. The following book contains the proceedings of the International Symposium on "Mobile Intensive Care Units and Advanced Emergency Care Units" at Mainz from September 24-27, 1973, and the discussions evoked by the first activities of the "Club of Mainz" and the inter nationally acknowledged "Recommendations". At this time we also announce the next meeting and International Symposium on Disaster Medicine, open to the public, organized by the "Club of Mainz" (October 1 - 2, 1977).

Sick babies and children are moved between hospitals for many reasons, often to receive specialist care and treatment not available locally. For the transfer to be safe and effective it is necessary to plan carefully for these occasions, and for the doctors and nurses attending the transport to be able to provide intensive care on the move. The book provides guidance in both of these major areas. The first section - 'Planning for Safe and Effective Transport' - details issues to be considered by senior staff in setting-up or modernising a transport programme. General principles and relevant physiology are outlined, and vehicles and equipment are discussed in depth. The second section - 'Practical Transport Management' - is concerned with different patient groups and key clinical issues. These include the distinctive features of neonatal and paediatric patients, and management of airway, breathing and circulation. Other chapters discuss airborne transport, pharmacology, trauma, and special interventions for transport such as extracorporeal membrane oxygenation and inhaled nitric oxide.

Catastrophic disasters occurring in 2011 in the United States and worldwide—from the tornado in Joplin, Missouri, to the earthquake and tsunami in Japan, to the earthquake in New Zealand—have demonstrated that even prepared communities can be overwhelmed. In 2009, at the height of the influenza A (H1N1) pandemic, the Assistant Secretary for Preparedness and Response at the Department of Health and Human Services, along with the Department of Veterans Affairs and the National Highway Traffic Safety Administration, asked the Institute of Medicine (IOM) to convene a committee of experts to develop national guidance for use by state and local public health officials and health-sector agencies and institutions in establishing and implementing standards of care that should apply in disaster situations—both naturally occurring and man-made—under conditions of scarce resources. Building on the work of phase one (which is described in IOM's 2009 letter report, *Guidance for Establishing Crisis Standards of Care for Use in Disaster Situations*), the committee developed detailed templates enumerating the functions and tasks of the key stakeholder groups involved in crisis standards of care (CSC) planning, implementation, and public engagement—state and local governments, emergency medical services (EMS), hospitals and acute care facilities, and out-of-hospital and alternate care systems. *Crisis Standards of Care* provides a framework for a systems approach to the development and implementation of CSC plans, and addresses the legal issues and the ethical, palliative care, and mental health issues that agencies and organizations at each level of a disaster response should address. Please note: this report is not intended to be a detailed guide to emergency preparedness or disaster response. What is described in this report is an extrapolation of existing incident management practices and principles. *Crisis Standards of Care* is a seven-volume set: Volume 1 provides an overview; Volume 2 pertains to state and local governments; Volume 3 pertains to emergency medical services; Volume 4 pertains to hospitals and acute care facilities; Volume 5 pertains to out-of-hospital care and alternate care systems; Volume 6 contains a public engagement toolkit; and Volume 7 contains appendixes with additional resources.
