The Army List Orchard Publications

This volume comprises the compounds of thorium with the 4th main group elements silicon and

germanium and all 5th main group elements except nitrogen. On the subject of ternary and  
 polynary compounds containing oxygen, only those compounds with phosphorus are included  
 (e.g., phosphates, hypophosphates, or phosphinates). Similar compounds of the other ele ments  
 like silicates, arsenates, etc. were already treated in "Thorium" Suppl. Vol. C 2, 1976. Most of the  
 compounds in the different systems treated in this volume are of scientific interest because of  
 their special physical and chemical properties. On the other hand, there are also many compounds  
 wh ich are of specific technological interest, mainly in the nuclear field. Refractory compounds like  
 ThSi or ThP have potential interest as nuclear fuel for special reactors due to their physical  
 properties like good heat conductivity and their chemical stability, e.g., against the corrosion of  
 cladding alloys for nuclear fuel elements. Due to the present situation in the further development  
 of the thorium nuclear fuel cycle, their large potential has not yet been fully investigated. For most  
 of the binary and ternary phases in these systems, we presently have good knowledge about the  
 preparation of the compounds and their physical and chemical properties. But nevertheless, there  
 are still a lot of open questions concerning phase equilibria, solid solutions, and homogeneity of  
 some of the phases described in this volume.

Acute Pain brings coverage of this diverse area together in a single comprehensive clinical reference, from the basic mechanisms underlying the development of acute pain, to the various treatments that can be applied to control it in different clinical settings. Much expanded in this second edition, the volume reflects the huge advances that continue to be made in acute pain management. Part One examines the basic aspects of acute pain and its management, including applied physiology and development neurobiology, the drugs commonly used in therapy, assessment, measurement and history-taking, post-operative pain management and its relationship to outcome, and preventive analgesia. Part Two reviews the techniques used for the management of acute pain. Methods of drug delivery and non-pharmacological treatments including psychological therapies in adults and children and transcutaneous electrical nerve stimulation are considered here. Part Three looks at the many clinical situations in which acute pain can arise, and the methods of treatment that may be suitable in each circumstance, whether the patient is young or old, has pain due to surgery, trauma, medical illness or childbirth, or is undergoing rehabilitation. Issues specific to the management of acute pain in the developing world are also covered here.
