Fifty Years Before the (Rotor) Mast Jeffrey Frank Jones

This book, with contributions by both leading scholars and industry experts, provides a coherent framework for understanding complex determinants and patterns of industry competitiveness. Divided into eight parts, it covers both quantitative and qualitative research on the following topics: technologies, economic development, and human resources in Industry 4.0; management in the digital economy; artificial intelligence and knowledge management approaches; drivers of sustainable and innovative development in corporations; resilient and competitive systems in the energy sector; compliance and anti-corruption mechanisms; and competence networks and technological integration. Thanks to its highly stimulating discussions on the determinants and patterns of industry competitiveness, this book appeals to a wide readership.

NASA Technical Memorandum

This is the final report on the advanced composite components which were placed in service on the 206L LongRanger helicopters in the continental United States, Canada, and Alaska. This report covers all test data which was gathered, as well as maintenance histories of the parts. The previous reports describe the fabrication, service experiences, and test data through 1986. This report contains information from these references, as well as data gathered after 1986. The status of the 40 sets of components is discussed. Each set consisted of a vertical fin, forward fairing, litter door, and baggage door. Almost 500,000 flight hours were accumulated on the 160 parts, with the high-time part accumulating 14,687 flight hours. Over 60 percent of the parts were destructively tested to measure strength and stiffness retention over the course of the program. The vertical fins had the greatest strength retention followed by the litter doors. The

baggage doors had the poorest retention of strength. There was very little difference in property retention between the four primary operating regions: Northwest U.S., Southwest U.S., Gulf of Mexico Coastal Region, and the Northeast U.S. and Eastern Canada Region. The field problems have ranged from two lightning-struck fins to significant delaminations in the baggage doors. There was only one environmentally related field incident, in which the glass windows on the litter doors were found to loosen due to high temperatures experienced in the southwest region. DS, GS and Depot Maintenance Repair Parts and Special Tool Lists

This book is a memoir of 50 years flying helicopters in a variety of situations. Included are rescues, combat operations, mountain and off-shore flying, medical evacuations, flight instruction and numerous flight missions that require pushing the flight envelope to the maximum. Highlighted are Ben Van Etten's five years as a flight captain with Air America, Inc. in Thailand and the unpublicized war in Laos. During that period the author describes in detail his interaction with other pilots and his "customers," primarily the CIA. The book also includes geographical and historical observations from a first person prospective. And a vivid description from inside the cockpit during many lifesaving missions. This book should tweak the interest of aviators and non-aviators alike.
