 This volume - now in its second edition - has been completely updated to provide the most comprehensive and accessible handbook of practices and tools for the clinical assessment of child and adolescent intelligence. Designed specifically as a teaching tool, it provides students with an accessible guide to interpretation and applies the same interpretive systems across many tests. It emphasizes the proper interpretation of intelligence tests within the context of a child's life

circumstances and includes several devices to enhance the logical processes of assessment, beginning with test selection and concluding with the reporting of results. In addition, Clinical Assessment of Child and Adolescent Intelligence: - Stresses the importance of the interpretive process over the value of specific tests - Fosters a deeper understanding of the intelligence construct - Emphasizes learning by example, using valuable case studies and vignettes designed to provide students with concrete models to emulate This edition covers all facets of intelligence testing, including detailed explanations of test interpretation, theory, research, and the full-range of testing options for preschoolers through adult clients. New chapters have been introduced on neuropsychological approaches, adolescent and adult intelligence, including coverage of WAIS-III and KAIT, and achievement and intelligence screeners have been added. And although designed primarily as a text for beginning graduate students, the book is also useful as a "refresher" for clinicians who are looking for updated assessment information.

The classic text—now updated with a new interpretive approach to the WAIS?-III *Assessing Adolescent and Adult Intelligence*, the classic text from Alan Kaufman and Elizabeth Lichtenberger, has consistently provided the most comprehensive source of information on cognitive assessment of adults and adolescents. The newly updated Third Edition provides important enhancements and additions that highlight the latest research and interpretive methods for the WAIS?-III. Augmenting the traditional "sequential" and "simultaneous" WAIS?-III interpretive methods, the authors present a new approach derived from Cattell-Horn-Carroll (CHC) theory. This approach combines normative assessment (performance relative to age peers) with ipsative assessment (performance relative to the person's own mean level). Following Flanagan and Kaufman's work to develop a similar CHC approach for the WISC?-IV, Kaufman and Lichtenberger have applied this system to the WAIS?-III profile of scores along with integrating recent WAIS?-III literature. Four appendices present the new method in depth. In addition to a detailed description, the authors provide a blank interpretive worksheet to help examiners make the calculations and decisions needed for applying the additional steps of the new system, and norms tables for the new WAIS?-III subtest combinations added in this approach. *Assessing Adolescent and Adult Intelligence* remains the premier resource for the field, covering not only the WAIS?-III but also the WJ III?, the KAIT, and several brief measures of intelligence, as well as laying out a relevant, up-to-date discussion of the discipline. The new, theory-based interpretive approach for the WAIS?-III makes this a vital resource for practicing psychologists, as well as a comprehensive text for graduate students.
