Thomas Telford
Argues that socially progressive companies led by Democratic CEOs consistently outperform their conservative and Republican counterparts, drawing on economic data to demonstrate the financial superiority of these "blue"

companies.

Corporate Agility Vault Inc.

Grossman and Jennings examine 15 industrial companies and find unique characteristics in their values and management styles--characteristics that other companies would be wise to understand and emulate. Each of the example companies knew they were in business to make money. Dynamic, questioning, and actively in step with

society's changes, they constantly asked themselves one critical question: What business are we in? The answers they found, the principles of management they discovered and practiced, and the values they recognized and adopted all led to prosperity. In the current age of gurus, buzzwords, and fad theories, these companies' stories reaffirm that there are notions, principles, and management techniques that have proved themselves over time and can lead an organization toward a profitable, enduring corporate life. The authors offer frank insights into how businesses survive and grow. Anecdotal but based on solid research, with clarifying diagrams and other illustrations, this book is a major contribution to our understanding of the past, and a view of what is best in the future of today's organizations.

Invent less. Innovate more. And join the next generation of successful global players. Innovation has become a mantra for organizations facing unprecedented market pressures and worldwide competition. But can it be taught or developed as a core competency? Are there rules for turning great ideas into breakthrough innovations that alter behavior and culture, change the company's customer relationship, and carve out a path to global business success? Profiling dozens of today's most innovative organizations, The Innovation Zone delivers a new playbook for creating a structured business model of innovation that focuses on process, not products, to generate sustainable value and competitive dominance.

The Instrument and Automation Engineers' Handbook (IAEH) is the #1 process automation handbook in the world. Volume one of the Fifth Edition, Measurement and Safety, covers safety sensors and the detectors of physical properties. Measurement and Safety is an invaluable resource that: Describes the detectors used in the measurement of process variables Offers application- and method-specific guidance for choosing the best measurement device Provides tables of detector capabilities and other practical information at a glance Contains detailed descriptions of domestic and overseas products, their features, capabilities, and suppliers, including suppliers' web addresses Complete with 163 alphabetized chapters and a thorough

index for quick access to specific information, Measurement and Safety is a must-have reference for instrument and automation engineers working in the chemical, oil/gas, pharmaceutical, pollution, energy, plastics, paper, wastewater, food, etc. industries. About the eBook The most important new feature of the IAEH, Fifth Edition is its availability as an eBook. The eBook provides the same content as the print edition, with the addition of thousands of web addresses so that readers can reach suppliers or reference books and articles on the hundreds of topics covered in the handbook. This feature includes a complete bidders' list that allows readers to issue their specifications for competitive bids from any or all potential product suppliers.

This book promotes the benefits of the development and application of energy information and control systems. This wave of information technology (IT) and web-based energy information and control systems (web based EIS/ECS) continues to roll on with increasing speed and intensity. This handbook presents recent technological advancements in the field,

as well as a compilation of the best information from three previous books in this area. The combined thrust of this information is that the highest level functions of the building and facility automation system are delivered by a web based EIS/ECS system that provides energy management, facility management, overall facility operational management and ties in with the enterprise resource management system for the entire facility or the group of facilities being managed.

"Web services are a group of closely related, emerging technologies based on an open, Internet-centric infrastructure. They are the driving force that makes corporate portals work, and the best, most

economic way of making content and services available to everyone within a corporation, as well as all of its suppliers and customers. And web services is the only area of IT seeing any increase in spending over the foreseeable future. Leveraging Web Services helps CEOs, CIOs, CTOs, and senior managers understand how web services can be applied to their own organizations. The book uses case studies and interviews to take readers inside top real-world enterprises that have conceptualized, developed, and implemented this new technology. From stock quotes, content syndication and mapping services, to payroll management, business intelligence, shipping and logistics and other applications, making the most of web services can open up huge possibilities. Featuring examples from Oracle, Microsoft, Sun Microsystems, Procter & Gamble, and Amazon.com, Leveraging Web Services offers a compelling examination of how the technology can be used for superior results."

The emphasis here is to explore the key issues influencing the culture, strategies and management operations of professional practices. The focus is upon established practices from growing ones to large international firms in the built environment. A key aim of the book is to promote aspects of management by function and activities, with discipline acting as context rather than the primary focus. The book is structured into sections around 3 main themes: managing the organisation; and managing specific issues that affect operations, and a third section reflects upon management from practitioner experience. Section I: 'Managing the organisation' looks at how the history of the firm creates both opportunities and rigidities for developing the practice, in terms of culture and market position, strategies and implementation, financial, marketing and HR management. Section II: 'Managing specific strategic and tactical issues' looks at how these affect approaches a discipline and operational processes in practices. These issues compliment those

covered in Section I. Section III: 'Reflecting on practice' covers experience of those in practice and top practitioners detail how they are addressing key issues in their practice and for their discipline. Each chapter by a practitioner has a postscript from academic authors to make links back to research on theory and application. Addresses the key issues facing practice managers Collects latest research from leading academics Offers comment on current practice from top practitioners

The latest update to Bela Liptak's acclaimed "bible" of instrument engineering is now available. Retaining the format that made the previous editions bestsellers in their own right, the fourth edition of Process Control and Optimization continues the tradition of providing quick and easy access to highly practical information. The authors are practicing engineers, not theoretical people from academia, and their from-the-trenches advice has been repeatedly tested in real-life applications. Expanded coverage includes descriptions of overseas manufacturer's products and concepts,

model-based optimization in control theory, new major inventions and innovations in control valves, and a full chapter devoted to safety. With more than 2000 graphs, figures, and tables, this all-inclusive encyclopedic volume replaces an entire library with one authoritative reference. The fourth edition brings the content of the previous editions completely up to date, incorporates the developments of the last decade, and broadens the horizons of the work from an American to a global perspective.
