This book project was
initiated in fall 2013 at the
University of Nebraska at
Omaha (UNO), Nebraska
during a Global

Engagement Research
and Teaching Workshop
between faculty from UNO
and the University of
Agder (UiA), Norway. The
anthology presents
articles that center on the
application of digital
technologies that add
value to the teaching and
learning process in a
globalized context. The
unique focus of the book

is the intersection
between pedagogy and
technology, specifically
the innovative use of
technology to improve
higher education teaching
and learning. With the
increased mobility of
faculty and students,
more diversity among our
students and faculty,
increased cross-
disciplinary designs,

alternative environments enabled by technology, and greater demand from the millennial generation for increased access and flexibility, it is important to share accounts where technology has made a positive impact on the instructional process. Topics that are discussed are local studies with implications for the global environment and the innovative use of technology to improve higher education teaching and learning. The target audiences for the book are researchers, teachers

and stakeholders in learning organizations interested in using IT for teaching and learning. *Compendium of Polymer Terminology and Nomenclature* OECD Publishing
 In recent decades churches have accommodated people with disabilities in various ways. Through access ramps and elevators and sign language, disabled persons are invited in to worship. But are they actually enfolded into the church's mission? Have the able-bodied come to

recognize and appreciate the potential contributions of people with disabilities in the ministry and witness of the church? Benjamin Conner wants to stimulate a new conversation between disability studies and Christian theology and missiology. How can we shape a new vision of the entire body of Christ sharing in the witness of the church? How would it look if we "disabled" Christian theology, discipleship, and theological education? Conner argues that it

would in fact enable congregational witness. He has seen it happen and he shows us how. Imagine a church that fully incorporates persons with disabilities into its mission and witness. In this vision, people with disabilities contribute to the church's pluriform witness, and the congregation embodies a robust hermeneutic of the gospel. Picture the entire body of Christ functioning beyond distinctions of dis/ability, promoting mutual flourishing and growing into fullness.

Here is an enlargement of the church's witness as a sign, agent, and foretaste of the kingdom of God. Here is a fresh and inspiring look at the mission of the church when it enfolds people with disabilities as full members. Missiological Engagements charts interdisciplinary and innovative trajectories in the history, theology, and practice of Christian mission, featuring contributions by leading thinkers from both the Euro-American West and the majority world whose

missiological scholarship bridges church, academy, and society.

The Walking Dead

Compendium is here!

Since 2003, Robert

Kirkman's The Walking

Dead has been redefining

the survival horror genre

with its unique and vivid

account of life after the

end of the world. Although

the cast is diverse and

often changing (including,

of course, a great number

of zombies), at the heart

of every tale is Rick Grimes: former police officer, husband, father, and de facto leader of a ragtag band of survivors looking to make a future for themselves in a world that no longer has one. To call *The Walking Dead* a zombie tale is accurate to a point, but it touches on only one facet of a story that asks timeless questions about what it means to live. It also asks whether or not this is possible in a world full of the dead. This is a great opportunity to experience this gripping read for the

first time or catch up on the tale with the first four years worth of material, collected in one volume for the first time. The first eight volumes of this fan-favorite series collected into one massive collection. This volume collects *THE WALKING DEAD #1-48*.

Responding to the signs of the time, this book brings the lens of Catholic social

thought (CST) to the enterprise of Catholic higher education in the United States. Scandals in the Church and the growth of religious non-affiliation in the culture have made being Catholic greatly challenging for Catholic colleges and universities, at the same time that the economics of higher education have mounted a challenge to the very viability of many institutions. This book throws light on what Catholic colleges and universities might and must do in order both to

preserve their mission and renew it for the future. CST is concerned with the right ordering of social institutions, or in other words the systems in which individuals live and work. CST is accordingly relevant not only to the internal dynamics and structures of Catholic colleges and universities, but to the system of U.S. higher education in which individual colleges and universities operate. This edited volume, consisting of high-quality chapters by authors with

disciplinary expertise, deploys the resources of CST to shed light on both internal and external challenges to, opportunities for, and obligations on institutions of Catholic higher education in the U.S. context.

Planet Earth has been here for over 4.5 billion years but in just two human generations we have managed to place

our only 'home' at great risk. Many lessons from history have not yet been learned and new lessons may prove equally, if not more, difficult to take on board as we head deeper into the twenty-first century. This book highlights two of our greatest social problems: changing the way we relate to the planet and to one another, and confronting how we use technology (dataism) for the benefit of both humankind and the planet. Covering a wide range of key topics,

including environmental degradation, modern life, capitalism, robotics, financing of war (vs peace) and the pressing need to re-orient society towards a sustainable future, the book contends that lifelong learning for sustainability is key to our survival. The author argues that One Health - recognising the fundamental interconnections between people, animals, plants, the environment - needs to inform the UN-2030 Sustainable Development Goals and that working

towards the adoption of a new mindset is essential. We need to replace our current view of limitless resources, exploitation, competition and conflict with one that respects the sanctity of life and strives towards well-being for all, shared prosperity and social stability. Clearly written, evidence based and transdisciplinary - and including contributions from the World Bank, InterAction Council, Chatham House, UNESCO, World Economic Forum, the Tripartite One Health collaboration (UN Food

and Agriculture Organization, World Organisation for Animal Health and World Health Organization), One Health Commission and more - this book cuts across sociopolitical, economic and environmental lines. It will be of great interest to practitioners, academics, policy-makers, students, nongovernment agencies and the public at large in both developed and developing nations.

In today's world, food security is an important issue. Food shortages push prices up, impacting upon the health and well-being of hundreds of millions of rural poor across the globe. One way to increase food security is to decrease the amount of yield lost to pests. The Pesticide Encyclopedia provides a comprehensive overview of the fight against pests, covering chemical pesticides, biocontrol agents and biopesticides. It also covers interrelated topics such as pesticide toxicity,

legislation and regulation, handling, storage and safety aspects, IPM techniques, resistance management, interaction of pesticides with soil and the environment. An important reference for policy makers, advisers and students and researchers of crop science, this book also includes useful notes on commonly known plant diseases and pests.

Mathematical Statistics with Applications in R, Second Edition, offers a modern calculus-based theoretical introduction to mathematical statistics and applications. The book covers many modern statistical computational and

simulation concepts that are not covered in other texts, such as the Jackknife, bootstrap methods, the EM algorithms, and Markov chain Monte Carlo (MCMC) methods such as the Metropolis algorithm, Metropolis-Hastings algorithm and the Gibbs sampler. By combining the discussion on the theory of statistics with a wealth of real-world applications, the book helps students to approach statistical problem solving in a logical manner. This book

provides a step-by-step procedure to solve real problems, making the topic more accessible. It includes goodness of fit methods to identify the probability distribution that characterizes the probabilistic behavior or a given set of data. Exercises as well as practical, real-world chapter projects are included, and each chapter has an optional section on using Minitab, SPSS and SAS commands. The text also boasts a wide array of coverage of ANOVA, nonparametric,

MCMC, Bayesian and empirical methods; solutions to selected problems; data sets; and an image bank for students. This book presents essays by eminent scholars from across the history of medicine, early science and European history, including those expert on the history of the book. The volume honors Professor Nancy Siraisi and reflects the impact

that Siraisi's scholarship has had on a range of fields. Contributions address several topics ranging from the medical provenance of biblical commentary to the early modern emergence of pathological medicine. Along the way, readers may learn of the purchasing habits of physician-book collectors, the writing of history and the development of natural history. Modeling the interdisciplinary approaches championed by Siraisi, this volume attests to the enduring

value of her scholarship while also highlighting critical areas of future research. Those with an interest in the history of science, the history of medicine and all related fields will find this work a stimulating and rewarding read.

Our species has coexisted in the world in a healthy and balanced way for 97% of its existence. It was only after our ancestors emerged from life in nature as hunter-gatherers that this all began to change. By the beginning of civilization some 6,000 years ago, these changes rigidified

and became destructive on a large scale. They have accumulated to such an extent that our species now faces extinction or a dismal future of ever-worsening ecocide. Meaninglessness and confusion have become rampant in our postmodern era. The human psyche has become utterly fragmented and rendered a stranger to reality, other people, and itself. As dispiriting as this all seems, the path forward has always been available to us if we can overcome

the ignorance that prevents us from taking it. We must reject the values of civilization and return to the naturalistic perspective of our ancestors where our values, thinking, feeling, and actions are once again based on how nature and reality truly function. While this approach should be evident, we have until now been too terrified, bewildered, or arrogant to adopt it. To help us succeed, Reality Unedited provides a simple model of reality that serves as a

foundation for establishing truth claims in the public sphere. Then we can finally take the actions necessary so our species, and all life on the planet, cannot only survive, but thrive. *Global Applications of One Health Practice and Care* Taylor & Francis Customs administrations around the world face new challenges: an increasing volume of international trade, a revolution in new technologies, and fundamental changes in business models. The

benefits of a well-performing customs administration are clear, as is the need to develop efficient, effective, fair, and modern customs administrations. *Customs Matters* analyzes the many changes and challenges customs administrations face and proposes ways to address them. By offering a cross-sectional view of the main aspects of customs administration, the book guides policymakers and customs officials as they evaluate the current state

of their customs system with a view to developing, reinforcing, or relaunching their own roadmaps for customs modernization. *Advances in Information and Communication* Oxford University Press THE ULTIMATE BINGE-READ!
