Improve your iPad and
iPhone workflows with
automation! Version
1.1, updated
09/30/2020 Apple's

Shortcuts app brings
extensive automation
capabilities to your
iPhone or iPad, using a
drag-and-drop, fill-in-
the-blanks interface
much like Automator
on the Mac. It lets you
perform sequences of
tasks, including ones
that span various apps,
with just a tap or a
voice command—or
even automatically
when certain
conditions are met.
Shortcuts can save you
time and effort, help
you accomplish
previously complicated

tasks, and let you customize your device to better meet your needs. And with iOS 14/iPadOS 14, Shortcuts has become even more powerful than before. But for all its utility, Shortcuts is not self-explanatory, so it can be challenging to figure out its quirks and create effective, time-saving automations. That's where *Take Control of Shortcuts* comes in. Written by automation expert Rosemary Orchard, this book opens the world of iOS/iPadOS automation to users at every level. With Rosemary's help, you'll learn how to:

- Navigate the Shortcuts app: Understand the user interface and terminology, then install and run your first shortcut.
- Run shortcuts: Discover

seven different ways to run a shortcut, from tapping an icon to using Home automations and Siri.

- Build shortcuts: Start with simple, one-step shortcuts and work your way up to complex shortcuts with input, output, variables, conditionals, loops, and more. Debugging advice is also included.
- Install and sync shortcuts: Download and install shortcuts others have written, sync your shortcuts across your devices, and share them with other people. Then, to both illustrate the main principles you've learned and give you practical tools to get you started, Rosemary walks you step by step through the creation of 15 sample shortcuts, which you can also

download and install using links in the book. Examples include: • Event templates • A daily overview • Converting and sharing images • Adding a song to a playlist • Logging expenses • Turning on lights automatically when you get home The book also discusses how Shortcuts can use REST APIs to talk to various web services (with detailed examples), and complementary apps that work in conjunction with Shortcuts. Whether you're completely new to automation or already have significant programming experience, you'll find plenty of useful information in this friendly, practical guide.

This unique volume focuses on computing systems that exhibit intelligent behavior. As such, it discusses research aimed at building a computer that has the same

cognitive architecture as the mind -- permitting evaluations of it as a model of the mind -- and allowing for comparisons between computer performance and experimental data on human performance. It also examines architectures that permit large, complex computations to be performed -- and questions whether the computer so structured can handle these difficult tasks intelligently.

Since the end of Dennard scaling in the early 2000s, improving the energy efficiency of

computation has been the main concern of the research community and industry. The large energy efficiency gap between general-purpose processors and application-specific integrated circuits (ASICs) motivates the exploration of customizable architectures, where one can adapt the architecture to the workload. In this Synthesis lecture, we present an overview and introduction of the recent developments on energy-efficient customizable architectures, including customizable cores and accelerators, on-chip memory customization, and interconnect optimization. In addition to a discussion of the general techniques and

classification of different approaches used in each area, we also highlight and illustrate some of the most successful design examples in each category and discuss their impact on performance and energy efficiency. We hope that this work captures the state-of-the-art research and development on customizable architectures and serves as a useful reference basis for further research, design, and implementation for large-scale deployment in future computing systems.

The Database and Expert Systems Application -DEXA - conferences are mainly oriented to establish a state-of-the art forum on Database and Expert System applications. But Practice without Theory has no sense, as Leonardo said five centuries ago. In this Conference we try a compromise between these two complementary aspects. A total of 5 sessions are application-oriented, ranging from classical applications to more unusual ones in Software Engineering. Recent research aspects in Databases, such as activity, deductivity and/or Object Orientation are also present in DEXA 92, as well as the

implication of the new "data models" such as OO-Model, Deductive Model, etc .. included in the Modelling sessions. Other areas of interest, such as Hyper-Text and Multimedia application, together with the classical field of Information Retrieval are also considered. Finally, Implementation Apects are reflected in very concrete fields. A total of of nearly 200 papers submitted from all over the world were sent to DEXA 92. Only 90 could be accepted. A Poster session has also been establishcd. DEXA 90 was held in Vienna, Austria; DEXA 91 in Berlin, Germany; and DEXA 92 will take place in Valencia, Spain, where we are celebrating the discovery of thc New World just five

centuries ago, in Leonardo's age. Both the quality of the Conference and the compromise between Practice and Theory are due to the credit of all the DEXA 92 authors.
