[Methods Applied Mathematics](#)

[Hildebrand Solution](#)

$u(x) = a \sin(x - p) + b \cos(x - p)$ where a and b are determined uniquely by the boundary conditions. This a very rapidly oscillating function over the entire interval. To apply perturbation methods we set $\epsilon = 0$ to get the outer solution $u(x) = 0$. This constant solution cannot be matched to rapid oscillations. *hildebrand methods of applied mathematics solution manual ...*
