It may not be a quick fix, but this concrete action plan for reform can create a less costly and healthier system for all. Beyond the outrageous expense, the quality of care varies wildly, and millions of Americans can't get care when they need it. This is bad for patients, bad for doctors, and bad for business. In *The Long Fix*, physician and health care CEO Vivian S. Lee, MD, cuts to the heart of the health care crisis. The problem with the way medicine is practiced, she explains, is not so much

who's paying, it's what we are paying for. Insurers, employers, the government, and individuals pay for every procedure, prescription, and lab test, whether or not it makes us better—and that is both backward and dangerous. Dr. Lee proposes turning the way we receive care completely inside out. When doctors, hospitals, and pharmaceutical companies are paid to keep people healthy, care improves and costs decrease. Lee shares inspiring examples of how this has been done, from physicians' practices that prioritize preventative care, to hospitals that adapt lessons from manufacturing plants to make them safer, to health care organizations that share online how much care costs and how well each physician is caring for patients. Using clear and compelling language, Dr. Lee paints a picture that is both realistic and optimistic. It may not be a quick fix, but her concrete action plan for reform—for employers and other payers, patients, clinicians, and policy makers—can reinvent health care, and create a

less costly, more efficient, and healthier system for all.

The Depository Trust Company reports the early 1970s origin and evolution of The Depository Trust Company (DTC), the world's largest securities depository, and how it became the basis of The Depository Trust & Clearing Corporation

(DTCC) in 1999. It describes the basic policies and company culture of DTC and DTCC and shows how these organizations made the clearance and settlement of virtually all trades in U.S. equity, corporate debt, and municipal securities more accurate and less costly, obliterating through automation the conditions that created the Wall Street "paperwork crisis" of the late 1960s.

In this paper, we develop a methodology to assess potential losses to the government that could arise from bank failures. The approach is intended to be simple, parsimonious, and used in real time. It generates an index that we call the banking sector contingent liability index (BCLI), based on the banking sector's size, concentration, diversification, leverage, and riskiness of assets. The index is illustrated for 32 advanced and emerging market economies from 2006 to 2013, as well as a group of banks including global systemically important banks (G-SIBs).
