Advances in trenchless pipe rehabilitation have been leaping forward in giant steps for the past twenty years. Because of its economical and technical efficiency, the pipe bursting method arouses great interest. This book introduces the technology of pipe rehabilitation by means of the pipe bursting method, provides extensive examples from practice and assists network owners, consulting engineers, planners and users in their every-day practice of specifying, tendering and performing pipe bursting projects.

A valuable source of reference on the current practices of analysis, design and construction of tunnels and underground structures in soft ground. This collection of reviewed papers covers a wide range of tunnelling practice, from deep excavations in Singapore to the construction of a new metro line in Barcelona. The international scope of the contributors makes this a truly comprehensive collection of work on the geotechnical aspects of soft ground excavation.

A discussion of quantitative chromatographic analysis, highlighting the critical factors involved. It details analytical procedures, outlining sample preparation, collection, transportation and storage. There are step-by-step guidelines for producing analytical reports.

The second part of the Geotechnical Engineering Handbook is dealing with the geotechnical procedures and their methods of global analysis and analytical procedures: Soil engineering, ground improvement, injection- and anchorage methods, driving and drilling, damp-proofing and waterproofing of structures, soil freezing, ground water lowering up to engineering-biological methods of slope protection.

Geotechnical Aspects of Underground Construction in Soft Ground comprises a collection of 112 papers, four general reports on the symposium themes, the Fujita Lecture, three Special Lectures and the Bright Spark Lecture presented at the Tenth International Symposium on Geotechnical Aspects of Underground Construction in Soft Ground, held in Cambridge, United Kingdom, 27-29 June 2022. The symposium is the latest in a series which began in New Delhi in 1994, and was followed by symposia in London (1996), Tokyo (1999), Toulouse (2002), Amsterdam (2005), Shanghai (2008), Rome (2011), Seoul (2014) and Sao Paulo (2017). This was organised by the Geotechnical Research Group at the University of Cambridge, under the auspices of the Technical Committee TC204 of the International Society for Soil Mechanics and Geotechnical Engineering (ISSMGE).

Geotechnical Aspects of Underground Construction in Soft Ground includes contributions from more than 25 countries on research, design and construction of underground works in soft ground. The contributions cover: Field case studies Sensing technologies and monitoring for underground construction in soft ground Physical and numerical modelling of tunnels and deep excavations in soft ground Seismic response of underground infrastructure in soft ground Design and application of ground improvement for underground construction Ground movements, interaction with existing structures and mitigation measures The general reports give an overview of the papers submitted to the symposium, covered in four technical sessions. The proceedings include the written version of the five invited lectures covering topics ranging from developments in geotechnical aspects of underground construction, tunnelling and groundwater interaction (short and long-term effects), the influence of earth pressure balance shield tunnelling on pre-convergence

and segmental liner loading (field observations, modelling and implications on design). Similar to previous editions, Geotechnical Aspects of Underground Construction in Soft Ground represents a valuable source of reference on the current practice of analysis, design, and construction of tunnels and deep excavations in soft ground. The book is particularly aimed at academics and professionals interested in geotechnical and underground engineering.

Ökologie und Ökonomie: Ihre Integration stellt eine wichtige Aufgabe für Ingenieure heute und in der Zukunft dar. Das Buch liefert eine zusammenfassende Darstellung der Analyse, Bewertung und Nutzung ökologischer Systeme durch den Menschen und seine Technik. Die Notwendigkeit der Einpassung ökonomischer Nutzung in die ökologischen Potentiale und die Grenzen dieser Nutzung werden deutlich gemacht. Der Leser erkennt sehr schnell, daß alle Systeme, auch Ökosysteme, nach relativ einfachen gemeinsamen Grundprinzipien arbeiten, daß jedes aber doch seine besondere Struktur hat, seine eigenen Schwachstellen und Nutzungsoptionen. Der Autor hat das Buch in einer Weise verfaßt, die auch dem Nichtfachmann die Problematik der Nutzung von ökologischen Systemen aufzeigt.

New demands on landscapes and natural resources call for multifunctional approaches to land development. Tools are required to identify the effects of land management on landscape sustainability and to support the decision-making process on the multipurpose utilisation of landscape resources. Scientists from across Europe installed the "Landscape Tomorrow" network to be prepared for new challenges in research to sustainable land development in an international perspective. This publication analyses general principles of landscape multifunctionality, develops methods to assess the sustainability of agricultural and forestry land management and identifies strategies of sustainable land management. Moreover, it contributes to the scientific basis for future land development strategies and helps support land use decision-making on the political, planning and management level.

This first open access volume of the handbook series contains articles on the standard model of particle physics, both from the theoretical and experimental perspective. It also covers related topics, such as heavy-ion physics, neutrino physics and searches for new physics beyond the standard model. A joint CERN-Springer initiative, the "Particle Physics Reference Library" provides revised and updated contributions based on previously published material in the well-known Landolt-Boernstein series on particle physics, accelerators and detectors (volumes 21A,B1,B2,C), which took stock of the field approximately one decade ago. Central to this new initiative is publication under full open access.

What do unions and environmental groups have to gain by working together and how do they overcome their differences? Brian Mayer looks at the role that health-related issues have played in creating a common ground between the two groups.

This book collects selected full papers presented at the International Symposium on Energy Geotechnics 2018 (SEG-2018), held on 25th - 28th September 2018, at the Swiss Federal Institute of Technology in Lausanne (EPFL). It covers a wide range of topics in energy geotechnics, including energy geostructures, energy geostorage, thermo-hydro-chemo-mechanical behaviour of geomaterials, unconventional resources, hydraulic stimulation, induced seismicity, CO2 geological storage, and nuclear waste disposal as well as topics such as tower and offshore foundations. The book is intended for postgraduate students, researchers and practitioners working on geomechanics and geotechnical engineering for energy-related applications.

Along with windstorms, floods are the most common and widespread of all natural disasters. Although they can often be predicted, they cause loss of life, damage and destruction, as many urban communities are located near coasts and rivers. In terms of victims, floods are responsible for more than half the deaths caused by natural catastrophes. As flood events appear to be rapidly increasing world-wide, an advanced and universal approach to urban flooding and how to manage will help reduce flood impact. This textbook integrates expertise from disciplines such as hydrology, sociology, architecture, urban design, construction and water resources engineering. The subject is approached from an international perspective and case studies, exercises, expert advice and literature recommendations are included to support the theory and illustrations. Developed by a team of specialists, this volume is intended for urban flood management education of hydrology, geography, civil and environmental engineering, and management students at university level. Moreover, professionals will find this book useful as a reference.
