Expertise arouses fears of a society ruled by an elite of specialists in white coats, or else it arouses derision because of the ineffectual bumbling of the so-called 'experts.'. In

Surpassing Ourselves, Bereiter and Scardamalia demonstrate that these stereotypes of expertise are false. Drawing upon the latest research in cognitive psychology, they show that expertise is something other than training, experience, knowledge, or formal qualifications. Many individuals acquire all these without ever

becoming experts, while some beginners, even schoolchildren, already approach problems in an 'expertlike' fashion. Expertise is a process of progressive problem-solving in which people continuously rethink and redefine their tasks. A future 'expert society' will not be a heaven in which all problems have disappeared, but a

realistic utopia in which endless problem-solving will be a highly-valued part of life.

How We Read Now

Mimesis

The day begins like any other Saturday for beautiful Parisian restaurateur Aurélie Bredin, until she wakes up to find her apartment empty - her boyfriend gone off with another woman. Heartbroken, Aurelie walks the streets of Paris in the rain, finally seeking refuge in a little bookshop in the Ile St. Louis, where she's drawn to a novel titled *The Smiles of Women* by obscure English author Robert Miller. She buys it and takes it home, but

when she begins to read she's astonished: *The Smiles of Women* can't possibly be about her restaurant ... about her. Except, it is. Flattered and curious to know more, Aurélie knows she must get in touch with the reclusive Mr Miller, but it proves to be a daunting task. His French publishers seem determined to keep his identity secret, and while the Editor-in-Chief André Chabanais is happy to give Aurelie his time, he seems mysteriously unwilling to help her find

her author. Is Robert Miller really so shy, or is there something that André isn't telling Aurélie?

Dopo centinaia d'anni la scienza è uscita dalla torre d'avorio ed è entrata nella società. Oggi non si fa scienza con la sola ricerca di laboratorio ma coinvolgendo diversi attori sociali. Ci sono gli scienziati, ma anche i politici, gli amministratori, gli imprenditori e la gente comune, giovani e adulti. Le loro paure, reali o

percepite, possono porre un freno ai suoi sviluppi. La loro fiducia e le loro speranze la alimentano e creano un clima di aspettative che non sempre vengono soddisfatte. Nella grande narrazione della scienza, i primi attori, gli scienziati, sono di volta in volta distruttori e benefattori, santi o mostri, padri del Golem dai piedi d'argilla o di Frankenstein che si rivolta e distrugge. Non di rado poi sono tanti Sisifo che ricominciano continuamente la loro impresa - e non è escluso

che agli occhi di alcuni condividano con Penelope l'abitudine di disfare di notte ciò che fanno di giorno. L'immagine di chi fa la scienza, scienziati e scienziate, è plasmata dagli atteggiamenti, dalle convinzioni e dalle credenze individuali e collettive che si muovono nella società. Tutto ha inizio dai più giovani: bambini e adolescenti.

David M. Levy wants us to

look at the documents that fill our lives, and his book *Scrolling Forward* is a thoughtful reflection on their near-omnipresence. Levy has the perfect recipe for this job--after getting his Ph.D. in Computer Science in 1981, he took off for England to pursue the study of calligraphy and bookbinding. His love of books shows in his writing, which is rich with references and anecdotes from Walt Whitman to Woody Allen. Drawing on examples as disparate as grocery store receipts,

greeting cards, identity papers, and (of course) e-mail, Levy finds the common threads binding them together and explores how and why we use them in daily life. He looks at digitization closely, considering how speed, ease of editing, and potentially perfect copying changes our traditional considerations of documentation. Though he insists that he's looking at the present, not speculating about the future, it's hard to see how to avoid looking ahead after reading

 Jason Epstein has led arguably the most creative career in book publishing during the past half-century. He founded Anchor Books and launched the quality paperback revolution, cofounded the New York Review of Books, and created of the Library of

America, the prestigious publisher of American classics, and The Reader's Catalog, the precursor of online bookselling. In this short book he discusses the severe crisis facing the book business today—a crisis that affects writers and readers as well as publishers—and looks ahead to the radically transformed industry that will revolutionize the idea of the book as profoundly as the introduction of movable type did five centuries ago.

Ho for the good green wood! Ho for brave Robin Hood! The adventures that flowed from the pen of Alexandre Dumas are well loved. Less known today are his tales of Robin Hood. It is our pleasure to provide these two old works to a new public: readers of the 21st Century. English versions of "The Prince of Thieves" and "Robin Hood the Outlaw" have virtually disappeared from bookshelves; they are now edited, corrected,

and made accessible to the world in print and e-formats, by the Reginetta Press. This volume continues the story begun in "The Prince of Thieves." Read more of Robin and Marian's romance, and learn of Robin's unlucky betrayal by a woman; of Robin's valiant leadership of the Merrie Men including Little John, Will Scarlett, and Friar Tuck; their battles against the Sheriff of Nottingham – and the craven Prince John. Outwitting crafty ecclesiastics along the way, Robin at last bows to

King Richard Coeur-de-Lion. Retold in Alfred Allinson's lush translation from the original French, the hero's adventure winds to a stirring conclusion.

Economic growth and the creation of wealth have cut global poverty rates, yet vulnerability, inequality, exclusion and violence have escalated within and across societies throughout the world. Unsustainable patterns of economic production and consumption promote global warming, environmental degradation and an upsurge in natural disasters. Moreover, while we have strengthened

international human rights frameworks over the past several decades, implementing and protecting these norms remains a challenge. These changes signal the emergence of a new global context for learning that has vital implications for education. Rethinking the purpose of education and the organization of learning has never been more urgent. This book is inspired by a humanistic vision of education and development, based on respect for life and human

dignity, equal rights, social justice, cultural diversity, international solidarity and shared responsibility for a sustainable future. It proposes that we consider education and knowledge as global common goods, in order to reconcile the purpose and organization of education as a collective societal endeavour in a complex world.

Race is real because we perceive it. Racism is real because we enact it. But the appeal to science to strengthen racist ideologies is on the rise - and increasingly part of

the public discourse on politics, migration, education, sport and intelligence. Stereotypes and myths about race are expressed not just by overt racists, but also by well-intentioned people whose experience and cultural baggage steer them towards views that are not supported by the modern study of human genetics. Even some scientists are uncomfortable expressing opinions deriving from their research where it relates to race. Yet, if understood correctly,

science and history can be powerful allies against racism, granting the clearest view of how people actually are, rather than how we judge them to be. *HOW TO ARGUE WITH A RACIST* is a vital manifesto for a twenty-first century understanding of human evolution and variation, and a timely weapon against the misuse of science to justify bigotry. *Coding with Basher: Coding with Scratch* W. people have fallen in love with Auggie Pullman, an ordinary boy with an extraordinary face—who shows us that kindness brings us together no matter how far apart we are. Read the book that inspired the Choose Kind movement, a major motion picture, and the critically acclaimed graphic novel *White Bird*. And don't miss R.J. Palacio's highly anticipated new novel, *Pony*, available now! I won't describe what I look like. Whatever you're thinking, it's probably

worse. August Pullman was born with a facial difference that, up until now, has prevented him from going to a mainstream school. Starting 5th grade at Beecher Prep, he wants nothing more than to be treated as an ordinary kid—but his new classmates can't get past Auggie's extraordinary face. Beginning from Auggie's point of view and expanding to include his classmates, his sister, her boyfriend, and others, the perspectives converge to form a portrait of one

community's struggle with empathy, compassion, and acceptance. In a world where bullying among young people is an epidemic, this is a refreshing new narrative full of heart and hope. R.J. Palacio has called her debut novel "a meditation on kindness" —indeed, every reader will come away with a greater appreciation for the simple courage of friendship. Auggie is a hero to root for, a diamond in the rough who proves that you can't blend in when you were

When ten-year-old Enaiatollah Akbari's small village in Afghanistan falls prey to Taliban rule in early 2000, his mother shepherds the boy across the border into Pakistan but has to leave him there all alone to fend for himself. Thus begins

Enaiat's remarkable and often punishing five-year ordeal, which takes him through Iran, Turkey, and Greece before he seeks political asylum in Italy at the age of fifteen. Along the way, Enaiat endures the crippling physical and emotional agony of dangerous border crossings, trekking across bitterly cold mountain pathways for days on end or being stuffed into the false bottom of a truck. But not everyone is as resourceful, resilient, or lucky as Enaiat, and there are many heart-wrenching

casualties along the way. Based on Enaiat's close collaboration with Italian novelist Fabio Geda and expertly rendered in English by an award-winning translator, this novel reconstructs the young boy's memories, perfectly preserving the childlike perspective and rhythms of an intimate oral history. Told with humor and humanity, *In the Sea There Are Crocodiles* brilliantly captures Enaiat's moving and engaging voice and lends urgency to an epic story of hope and

survival.

Within the rapidly expanding field of educational technology, learners and educators must confront a seemingly overwhelming selection of tools designed to deliver and facilitate both online and blended learning. Many of these tools assume that learning is configured and delivered in closed contexts, through learning management systems (LMS). However, while traditional "classroom"

learning is by no means obsolete, networked learning is in the ascendant. A foundational method in online and blended education, as well as the most common means of informal and self-directed learning, networked learning is rapidly becoming the dominant mode of teaching as well as learning. In *Teaching Crowds*, Dron and Anderson introduce a new model for understanding and exploiting the pedagogical potential of Web-based technologies,

one that rests on connections — on networks and collectives — rather than on separations. Recognizing that online learning both demands and affords new models of teaching and learning, the authors show how learners can engage with social media platforms to create an unbounded field of emergent connections. These connections empower learners, allowing them to draw from one another's expertise to formulate and fulfill their own

educational goals. In an increasingly networked world, developing such skills will, they argue, better prepare students to become self-directed, lifelong learners.

Mobile Learning: The Next Generation documents the most innovative projects in context-aware mobile learning in order to develop a richer theoretical understanding of learning in modern mobile-connected societies. Context-aware mobile learning takes

advantage of cell phone, mobile, and pervasive personal technologies to design learning experiences that exploit the richness of both indoor and outdoor environments. These technologies detect a learner's presence in a particular place, the learner's history in that place or in relation to other people and objects nearby, and adapt learning experiences accordingly, enabling and encouraging learners to use personal and social technologies to capture

aspects of the environment as learning resources, and to share their reactions to them. [Clocks and Culture, 1300-1700](#) Cambridge University Press

One of the finest novels by iconic British author Charles Dickens, this

Victorian tale follows the good-natured orphan Pip as he makes his way through life. As a boy, Pip crosses paths with a convict named Magwitch, a man who will heavily influence Pip's adulthood. Meanwhile, the earnest young man falls for the beautiful Estella, the

adoptive daughter of the affluent and eccentric Miss Havisham. Widely considered to be Dickens's last great book, the story is steeped in romance and features the writer's familiar themes of crime, punishment, and societal struggle.
