With increased resilience in the financial systems, emerging Asian economies were less affected by the recent global financial crisis, recovering more quickly from the crisis than major advanced economies. Yet, Asian financial systems remain underdeveloped. More open and efficient financial systems continue to be a key priority for Asia's development strategy. Emerging Asian economies need to tackle the new challenges to macroeconomic and financial stability posed by financial globalisation. This book identifies the key challenges to Asia's financial development in an era of rapid financial globalisation and discusses their policy implications for financial reforms and regional cooperation in East Asia. Particular areas of focus include: the impact of financial

globalisation on economic stability and inequality in East Asian economies; the progress of Asia's regional financial cooperation and lessons from the recent European economic crisis; and the priority of financial reforms in individual Asian economies. Combining advanced econometric methods and in-depth case studies, this book provides rigorous and contextual analyses of the most critical issues for Asia's financial development. It offers a comprehensive and useful guide for students, academics, and policymakers interested in the current state and future prospects of Asian financial systems.

Based on the author's own involvement as an engineer at the company through the 1950s and early 1960s and on more recent research of the archives at Brooklands Museum and the PRO, this book explains the successes and failures of leading-edge developments at Vickers, in the early days of guided weapons. John Forbat explains missile and avionics systems and trials, with diagrams and photographs, and tells the story of the company and its individuals. Projects covered in depth include Red Rapier, Blue Boar, Red Dean and Vigilant anti-tank missile, of which the author has first-hand experience as he started working for Vickers as a graduate apprentice assembling airplanes and soon graduated into Special Projects where he was responsible for many of the trials.

Audit Guide for the Low-rent Housing Program for Use by Independent Public Accountants MIT Press

This book develops an original version of act-consequentialism. It argues that act-consequentialists should adopt a subjective criterion of rightness. The book develops new arguments which strongly suggest that, according to the best version of act-consequentialism, the rightness of actions depends on expected rather than actual value. Its findings go beyond the debate about consequentialism and touch on important debates in normative ethics and metaethics. The distinction between criterion of rightness and decision procedures addresses how, why, and in which sense moral theories must be implemented by ordinary persons. The discussion of the rationales of "ought" implies "can" leads to the discovery of a hitherto overlooked moral principle, "ought" implies "evidence", which can be used to show that most prominent moral theories are false. Finally, in the context of discussing cases that are supposed to reveal intuitions that favour either objective or subjective consequentialism, the book argues that which cases are relevant for the discussion of objectivism and subjectivism depends on the type of moral theory we are concerned with (consequentialism, Kantianism, virtue ethics, etc.). From Value to Rightness will be of interest to scholars and advanced students working in normative ethics and metaethics.

"This research and development effort, called Combined Arms Operations at Brigade Level, Realistically Achieved Through Simulation III (COBRAS III), designed simulation -based, structured training for the staffs of the conventionally-equipped brigade combat team (BCT). The effort included designing a progressive approach to presenting and utilizing training objectives. The resulting product was a set of "performance objectives" that provides techniques and procedures for command and staff performance. The performance objectives resulted from and support the purpose of the training, which is to facilitate BCT preparation for combat training center rotations and deployment. The performance objective concept was an extension of the task analysis work conducted during the two proceedings projects. -- COBRAS I and COBRAS II."--DTIC.

B is one of the few formal methods which has robust, commercially-available tool support for the entire development lifecycle from specification through to code generation. This volume provides a comprehensive introduction to the B Abstract Machine Notation, and to how it can be used to support formal specification and development of high integrity systems. A strong emphasis is placed on the use of B in the context of existing software development methods, including object-oriented analysis and design. The text includes a large number of worked examples, graduated exercises in B AMN specification and development (all of which have been class-tested), two extended case studies of the development process, and an appendix of proof techniques suitable for B. Based on material which has been used to teach B at postgraduate and undergraduate level, this volume will provide invaluable reading a wide range of people, including students, project technical managers and workers, and researchers with an interest in methods integration and B semantics.
