Public health nurses focus on population health through continuous surveillance and assessment of multiple health determinants to promote health and

wellness, prevent disease, disability and premature death, and improve the quality of life. These RNs address population health priorities through identifying, implementing, and evaluating universal and targeted evidence-based programs and services that provide primary, secondary, and tertiary preventive interventions. Public health nursing practice emphasizes primary prevention with the goal of achieving health equity. The American Nurses Association convened a workgroup of nurse experts to create a definitive resource that addresses the interrelated issues of professional accountability, autonomy, and responsibilities of the public health nurse. With input from across the nursing profession, the workgroup developed *Public Health Nursing: Scope and Standards of Practice, 2nd Edition*. This comprehensive, up-to-date delineation of the competent level of nursing practice and professional performance of public health nurses applies in all practice levels and settings. The publication's scope of practice addresses what is expected of all public health nurses by specifying the who, what, where, when, why, and how of their practice. The detailed discussion of that scope of practice gives the context—the underlying assumptions, characteristics, environments and settings, education and training requirements, key issues and trends, and ethical and conceptual bases of the specialty-needed to understand and use the public health nursing standards of practice. All public health nurses are held accountable to these 17 standards, which provide a framework for evaluating outcomes, goals, and their specialty practice. The set of specific competencies accompanying each standard serves as evidence of minimal compliance with that standard. While this foundational volume is primarily for those directly involved with public health nursing practice, education, and research, other nursing and allied healthcare providers, researchers, and scholars will find value in this content. In addition, it is a resource for employers, insurers, lawyers, regulators, policy makers, and stakeholders. About ANA's Specialty Nursing Standards Since the late 1990s, ANA has partnered with other nursing organizations to establish a formal process for recognition of specialty areas of nursing practice. This includes the criteria for approving the specialty itself and the scope statement and an acknowledgment by ANA of the standards of practice for that specialty. Because of the significant changes in the evolving nursing and healthcare environments,

ANA's approval of specialty nursing scope statements and its acknowledgment of specialty standards of practice remain valid for five years, starting from the publication date of the documents. The standards in this publication are based on language from ANA's *Nursing: Scope and Standards of Practice, Second Edition*, a helpful supplement to this specialty text, which in turn is of optimal use with two complementary ANA texts: *Nursing's Social Policy Statement The Essence of the Profession* and *Guide to the Code of Ethics for Nurses: Interpretation and Application*. These three books are also available as a set, ANA's *Foundation of Nursing Package*, to guide nursing practice, thinking, and decision-making. The set is proving useful as a professional reference. A completely new chapter includes specific, practical information in helpful case studies with questions for students to address and example nursing reflections. Critical View boxes with discussion questions on contemporary issues have been strengthened to include a social justice and equity lens. Determinants of Health boxes have been expanded to explore more critically the meaning and impact of facts presented to stimulate class discussion. Extensive new section on Aboriginal Peoples in Canada; updated section on working with newcomers. Updated information includes SARS, the H1N1 pandemic, updated global TB statistics, and global and Canadian HIV/AIDS information. The decade ahead will test the nation's nearly 4 million nurses in new and complex ways. Nurses live and work at the intersection of health, education, and communities. Nurses work in a wide array of settings and practice at a range of professional levels. They are often the first and most frequent line of contact with people of all backgrounds and experiences seeking care and they represent the largest of the health care professions. A nation cannot fully thrive until everyone - no matter who they are, where they live, or how much money they make - can live their healthiest possible life, and helping people live their healthiest life is and has always been the essential role of nurses. Nurses have a critical role to play in achieving the goal of health equity, but they need robust education, supportive work environments, and autonomy. Accordingly, at the request of the Robert Wood Johnson Foundation, on behalf of the National Academy of Medicine, an ad hoc committee under the auspices of the National Academies of Sciences, Engineering, and Medicine conducted a study aimed at envisioning and charting a path forward for the nursing profession to help reduce inequities in people's ability to achieve their full health potential. The ultimate goal is the achievement of health equity in the United States built on strengthened nursing capacity and expertise. By leveraging these attributes, nursing will help to create and contribute comprehensively to equitable public health and health care systems that are designed to work for everyone. *The Future of Nursing 2020-2030: Charting a Path to Achieve Health Equity* explores how nurses can work to reduce health disparities and promote equity, while keeping costs at bay, utilizing technology, and maintaining patient and family-

focused care into 2030. This work builds on the foundation set out by *The Future of Nursing: Leading Change, Advancing Health* (2011) report.

Foundations of Community Health Nursing Lippincott Williams & Wilkins

Public health practice focuses on the prevention of disease and disability as a means of promoting the health of individuals and their communities. Achieving this is dependent on nurses and public health practitioners implementing the core functions of practice—assessment, assurance, and policy development. Because the public health workforce is composed of individuals from a number of disciplines with varying areas of expertise, there is a clear need for a thorough examination of the core competencies necessary for successful public health based on community needs. Developed as an advanced text for students in public and community health nursing, *Public and Community Health Nursing Practice* presents a comprehensive summary of the core functions of population-based practice. This practice is the cornerstone of the Healthy People 2010 national objectives, and the foundation upon which the health of a given community may be ensured. The book's population-based approach, theoretical content, and emphasis on evidence-based research are perfectly suited for faculty and students in nursing, public health, and behavioral medicine. Author Demetrius James Porche also includes current public health and nursing practice, making this a unique and indispensable reference for public and community health nurses and nursing administrators, as well as practitioners in other specialties, such as family or primary care nursing. The book also includes appendices, illustrations, tables, and chapter summaries that reiterate important public and community population-based health nursing content. *Promoting and Protecting the Public's Health* Jones & Bartlett Learning  
Ensuring students meet the competencies outlined in the Quad Council of Public Health Nursing Organizations (ACHNE, 2011) and AACN's (2008) publication *Essentials of Baccalaureate Education for Professional Nursing Practice* Community and Public Health Nursing, the 3rd Edition of *Community & Public Health* is a primer to community, public, and population health nursing that develops students' abstract critical thinking skills and complex reasoning abilities through case studies, exercises, and examples throughout the highly illustrated text. Authors DeMarco & Healey-Walsh

introduce public health concepts from an evidence-based perspective, allowing students to make connections between data and practice decisions. Because evidence-based practice guides quality performance improvements, the authors teach students to gather, assess, analyze, apply, and evaluate evidence— derived from epidemiology and other sources— for making public health practice decisions and for planning the care of individuals, families, and groups in the community. Examples assist students in interpreting and applying statistical data. The authors integrate timely topics (major challenges to nursing practice in the community, community and public health nursing specialties, cultural diversity, health disparities, globalism, epidemiology and basic biostatistics, and ethical considerations, Preventative immunizations, political proactiveness, advanced practice preparation, sustainable health goals, ebola, telehealth, opioid epidemic, veterans and LBGQ as a underserved populations, iPrepare, health literacy, health promotion conferences, and Healthy People 2020.) Special attention will be given to add additional features and ancillaries that allow students to actively learn. Healthy People 2020, and students will complete short active learning activities/questions will allow students apply the goals to real-life scenarios. NEW to this edition's ancillary package are unfolding case studies related to our new clinical replacement solution Lippincott Clinical Experiences: Community, Public, and Population Health. Our PowerPoints have been enhanced and are now heavily illustrated. *Population Health for Nurses* National Academies Press
