 When Fortune Magazine estimated that 70% of all strategies fail,
 it also noted that most of these strategies were basically sound,
 but could not be executed. The central premise of Strategic
 Project Management Made Simple is that most projects and
 strategies never get off the ground because of adhoc, haphazard,
 and obsolete methods used to turn their ideas into coherent and
 actionable plans. Strategic Project Management Made Simple is
 the first book to couple a step-by-step process with an interactive

thinking tool that takes a strategic approach to designing projects
 and action initiatives. Strategic Project Management Made Simple
 builds a solid platform upon four critical questions that are vital
 for teams to intelligently answer in order to create their own
 strong, strategic foundation. These questions are: 1. What are we
 trying to accomplish and why? 2. How will we measure success?
 3. What other conditions must exist? 4. How do we get there?
 This fresh approach begins with clearly understanding the what
 and why of a project - comprehending the bigger picture goals
 that are often given only lip service or cursory reviews. The
 second and third questions clarify success measures and identify
 the risky assumptions that can later cause pain if not spotted
 early. The how questions - what are the activities, budgets, and
 schedules - comes last in our four-question system. By contrast,
 most project approaches prematurely concentrate on the how
 without first adequately addressing the three other questions.
 These four questions guide readers into fleshing out a simple, yet
 sophisticated, mental workbench called "the Logical Framework"
 - a Systems Thinking paradigm that lays out one's own project
 strategy in an easily accessible, interactive 4x4 matrix. The
 inclusion of memorable features and concepts (four critical

questions, LogFrame matrix, If-then thinking, and Implementation Equation) make this book unique.

This book explores the linkages between Amartya Sen's Capability Approach and participatory forms of development – especially those associated with critical pedagogy and empowerment from the bottom-up. It shows how the capability approach and the participatory movement can complement and reinforce each other helping to ensure that democratic principles are respected and become the foundation for sustainable human development. The Capability Approach provides guiding principles for protecting the transformative roots of participation (safeguarding ownership, accountability and empowerment), while participation delivers vital methods for making the Capability Approach operational. Divided into three overlapping parts that focus on concepts, methods and applications, this work draws on diverse fieldwork experiences to unpack power relations, address adaptive preferences, explore individual and collective agency, consider new partnerships for development, and develop innovative concepts.

This study presents challenging findings on language choice and discourse formation in participatory development co-operation. Situated in the framework of two rural development programs in Tanzania, it questions multilingual routines in development co-operation and deals with issues of linguistic exclusion in postcolonial societies. At the same time, it demonstrates how development objectives are negotiated at grass-root level, addressing persistent questions of agency in donor-driven planning processes.

Correctly functioning evaluation systems directly influence the efficient and effective planning and implementation of projects and the achievement of organisational objectives. This book critically analyses the results of research dedicated to mixed intelligent systems for project evaluation, taking into account the current state of knowledge in the field of project management. It argues for the need to move away from classical concepts and deploy interdisciplinary research methods in the development of comprehensive project evaluation systems. Considering contemporary issues relating to project evaluation, the author deals with both quantitative and qualitative evaluation methods and the problems surrounding systems that integrate them, before discussing the process of modelling mixed intelligent systems. *Mixed Intelligent Systems* makes a thought-provoking case for harnessing interdisciplinary methods and new ideas in project management research when developing evaluation systems.

In *Changing Bureaucracies*, international experts provide an unparalleled look at how public sector bureaucracies can better adapt to the reality of unprecedented levels of uncertainty and complexity, and how they can better respond to the emerging needs and demands of citizens and beneficiaries. In particular, they discuss in detail how evaluation can play an important role in aiding bureaucracies in adapting, while noting that the value of evaluation is not at all automatic. Written in a clear and accessible prose, the contributors identify stability as a strength

of bureaucratic structures, although adaptability is required in order to remain relevant. They also emphasize the need for bureaucratic rules and practices to be open to examination, such as through evaluation, noting that these rules may take on a life of their own, increasing distrust and conflicting with a meaningful focus on how outcomes and impacts benefit citizens. The book concludes with guidance for both evaluators and for public sector leaders about steps that they can take to improve the responsiveness and relevance of public sector organizations. Pioneering the provision of reflections on how evaluation can play an important role in aiding bureaucracies in adapting, *Changing Bureaucracies* is an important acquisition for public sector leaders, evaluators, evaluation managers and commissioners and academics alike.

Policy evaluation is an important and well-established part of the policy process, facilitating and feeding back to promote the ongoing effectiveness of policies that have been implemented or anticipating policies in the making. Environmental policy is a special case, presenting new complexities uncommon to other areas, which standard evaluation tools are ill-equipped to grapple with. It is also an area that is experiencing rapid growth throughout the world and knowledge is now needed at all levels of government and in NGOs, businesses and other organizations, all of whom are required to assess the effectiveness of their policies. This handbook is the first guide to environmental policy evaluation in practice. Beginning with an introduction to the general principles of evaluation, it explains the particular complexities native to the environmental sphere and provides a comprehensive toolkit of evaluation methods and techniques which the practitioner can employ and refer to again and again. The authors also consider design issues which may face the policy evaluator, including involvement of stakeholders, the sensitivities between them, the a priori assessment of the evaluability of a field, the maximization of the utilization of the evaluations outcomes, and much more. Throughout, the theory is illustrated with practical examples from around the world, making this the essential companion guide for anyone tasked with ensuring that environmental policy fulfils its aims and achieves its potential.

the methods being used to manage them and the specific tools and processes that most often lead to success.

Handbook for Objectives-oriented Project Planning Oxfam
Evaluating Communication for Development presents a comprehensive framework for evaluating communication for development (C4D). This framework combines the latest thinking from a number of fields in new ways. It critiques dominant instrumental, accountability-based approaches to development and evaluation and offers an alternative holistic, participatory, mixed methods approach based on systems and complexity thinking and other key concepts. It maintains a focus on power, gender and other differences and social norms. The authors have designed the framework as a way to focus on achieving sustainable social change and to continually improve and develop C4D initiatives. The benefits and rigour of this approach are supported by examples and case studies from a number of action research and evaluation capacity development projects undertaken by the authors over the past fifteen years. Building on current arguments within the fields of C4D and development, the authors reinforce the case for effective communication being a central and vital component of participatory forms of development, something that needs to be appreciated by decision makers. They also consider ways of increasing the effectiveness of evaluation capacity development from grassroots to management level in the development context, an issue of growing importance to improving the quality, effectiveness and utilisation of monitoring and evaluation studies in this field. The book includes a critical review of the key approaches, methodologies and methods that are considered effective for planning evaluation, assessing the outcomes of C4D, and engaging in continuous learning. This rigorous book is of immense theoretical and practical value to students, scholars, and professionals researching or working in development, communication and media, applied anthropology, and evaluation and program planning.

Choosing Research Methods CRC Press

A major reason complex programs are so difficult to evaluate is that the assumptions that inspire them are poorly articulated. Stakeholders of such programs are often unclear about how the change process will unfold. Thus, it is so difficult to reasonably anticipate the early and midterm changes that need to happen in order for a longer-term goal to be reached. The lack of clarity about the “mini-steps” that must be taken to reach a long-term outcome not only makes the task of evaluating a complex initiative challenging, but reduces the likelihood that all of the important factors related to the long term goal will be addressed. Most of the resources that have attempted to address this dilemma have been popularized as theory of change or sometimes program theory approaches. Although these approaches emphasize and elaborate the sequence of changes/mini steps that lead to the long-term goal of interest and the connections between program activities and outcomes that occur at each step of the way, they do not do enough to clarify how program managers or evaluators should deal with assumptions. Assumptions, the glue that holds all the pieces together, remain abstract and far from applicable. In this book the author tackles this important assumptions theme head-on—covering a breadth of ground from the epistemology of development assumptions, to the art of making logical assumptions as well as recognizing, explicit zing and testing assumptions with in an elaborate program theory from program design, implementation, monitoring and evaluation.

Techniques and technologies for sustainability SAGE Publications Learning from Change provides an overview of the common themes and experiences in participatory approaches to monitoring and evaluation across different institutions and sectors. It is a compilation of selected case studies and discussions between practitioners, academics, donors, and policymakers in participatory monitoring and evaluation (PM&E).

It explores conceptual, methodological, institutional, and policy issues that need to be addressed to enrich our understanding and practice of PM&E. The book is in three sections. The first provides a general overview of PM&E, synthesizing literature surveys and regional reviews of PM&E practice around the world. The second presents case studies that illustrate the diverse range of settings and contexts in which PM&E is being applied. The third raises the key issues and challenges arising from the case studies and discussions, and proposes areas for future research and action. Learning from Change will be an important reference for development professionals worldwide as well as for anyone interested in the process of participatory development, including researchers, academics, fieldworkers, development practitioners, and policymakers.
