 Are your students excited about writing? Do you want them to be? Do you want them to ask for more writing opportunities and assignments? Do you want them to engage in writing tasks more quickly and with more fluency? The traditional five-step writing process never explicitly teaches students to be fluent in their writing—to be able to write quickly on any topic. Extreme Writing targets precisely that with focused, daily writing sessions that provide students with consistent, long-term engagement. It is designed to appeal to students in grades 4–8, and—best of all—the approach involves little extra work for you. In *The Power of Extreme Writing*, author Diana Cruchley not only outlines the process but also describes what it looks like in the classroom, explains how to assess student work, and highlights more than a dozen unique inspirations that motivate students to write.

Extreme Writing: it's fun, it's fast, and it works.

 This book contributes to the growth of interest in Content and Language Integrated Learning (CLIL), an approach to second/foreign language learning that requires the use of the target language to learn content. Within the framework of European strategies to promote multilingualism, CLIL has begun to be used extensively in a variety of language learning contexts, and at different educational systems and language programmes. This book brings together critical analyses on theoretical and implementation issues of Content and Language Integrated Learning, and empirical studies on the effectiveness of this type of instruction on learners' language competence. The basic theoretical assumption behind this book is that through successful use of the language to learn content, learners will develop their language proficiency more effectively while they learn the academic content specified in the curricula.

 Within the field of second language acquisition, interest in the acquisition of French as a second language has a long-standing tradition, especially in the European context. The aim of this book is to offer a synthesis of current research within this area. It contains contributions from different researchers in the field, including studies on the acquisition of grammar, formulaic language, lexis and pragmatic devices, and covering interlanguage development from beginner level up to very advanced, presumably near-native levels of proficiency. The learners in the studies reported in the volume represent different L1 backgrounds and age groups. The chapters shed light on current issues in research on second language acquisition from different theoretical perspectives, and contribute to a better understanding of L2 French and SLA in general. The volume should be of interest for students, teachers and researchers of L2 French and SLA. Originally published in *Language, Interaction and Acquisition* 3:1 (2012)

This book presents a thorough description of morphosyntactic knowledge developed by learners of French in four different learning situations — first language (L1) acquisition, second (L2) language acquisition, bilingualism, and acquisition by children with Specific Language Impairment — within the theoretical framework of generative grammar. This approach allows for multiple comparisons across acquisition contexts, which provides the reader with invaluable insights into the nature of the acquisition process. The book is divided into four parts each dealing with a major morphosyntactic domain of acquisition: the verbal domain, the pronominal domain, the nominal domain, and the CP domain. Each part contains four chapters, the first one presenting an overview of the basic facts and analyses of the relevant properties of French, and the next three focusing on the different acquisition contexts. This book will be useful to anyone interested in the acquisition of French and in language development in general. It is also meant to stimulate cross-linguistic research from a theoretical perspective.

It's true that some people spend years studying German before they finally get around to speaking the language. But here's a better idea. Skip the years of study and jump right to the speaking part. Sound crazy? No, it's language hacking. Unlike most traditional language courses that try to teach you the rules of German, #LanguageHacking shows you how to learn and speak German through proven memory techniques, unconventional

shortcuts and conversation strategies perfected by one of the world's greatest language learners, Benny Lewis, aka the Irish Polyglot. Using the language hacks -shortcuts that make learning simple - that Benny mastered while learning his 11 languages and his 'speak from the start' method, you will crack the language code and exponentially increase your language abilities so that you can get fluent faster. It's not magic. It's not a language gene. It's not something only "other people" can do. It's about being smart with how you learn, learning what's indispensable, skipping what's not, and using what you've learned to have real conversations in German from day one. The Method #LanguageHacking takes a modern approach to language learning, blending the power of online social collaboration with traditional methods. It focuses on the conversations that learners need to master right away, rather than presenting language in order of difficulty like most courses. This means that you can have conversations immediately, not after years of study. Each of the 10 units culminates with a speaking 'mission' that prepares you to use the language you've learned to talk about yourself. Through the language hacker online learner community, you can share your personalized speaking 'missions' with other learners - getting and giving feedback and extending your learning beyond the pages of the book . You don't need to go abroad to learn a language any more.
