First published in 1976,
The World Atlas of Golf
was the first book to
take a global view of
the sport and the
history and architects
of course design. Now,

over 30 years later, it's
better than ever.
Completely new text
has been written by an
expert panel
comprising course
designers, ex-tour
Pros, leading
journalists and
commentators from
around the globe. The
book covers the
courses that are
seminal to the history

of the sport together with those that simply demonstrate architectural brilliance. Sumptuous computer-generated artworks accompany the details of each course, illustrating their features in impressive detail, while 'cut-away' illustrations of signature holes highlight their particular challenges and show the course architect's ingenuity. With feature pages that provide a thorough understanding of the golfing scene in every part of the world and maps showing the locations of key clubs, this is the book that set the benchmark in golf publishing.

Complete guidelines to developing and maintaining the most effective, environment-friendly irrigation systems for golf courses Golf Course Irrigation offers valuable insight on the design, installation, management, and maintenance of irrigation systems-the most important management tool used on today's golf courses. Without manufacturers' bias, this useful resource provides hands-on guidance to the highest quality irrigation systems, including specifications and applications of the best pump stations, controllers, sprinkler heads, nozzles, valves, sensors, and other components that make the difference in top-quality irrigation

systems. Typically regarded as significant users of water, golf courses are under increasing scrutiny by governmental and environmental groups, making it essential that the up-to-date information found here-on such topics as water supply, plant irrigation requirements, application uniformity, and construction management-be at the fingertips of every golf course professional. While fostering the best playing conditions, these systems conserve water and energy with such technology as low-pressure heads and controls that use "if/then" logic to automatically adjust to changing conditions, which can improve playability while saving

money. Golf Course Irrigation is a practical tool to help golf course architects, builders, superintendents, irrigation consultants, designers, and installers to improve aesthetics and playing conditions in the face of diminishing natural resources. It is also an informative reference for golf course owners, developers, local officials, students, and fans of the game. *It's Easier Than You Think* Fodor's 'An effective golf swing will produce a thousand correct positions - but a thousand correct positions won't produce an effective golf swing'. Using a thorough analysis of more than 200 research articles, author Chris Riddoch - a scratch golfer in his

teens and one of the UK's leading sports scientists - explains why this statement is true. In *The Golf Swing*, he describes why we must avoid the endless technical complexities of the 'swing theory quagmire'. He explains how dissecting the swing into countless angles and positions and trying to recombine them actually stifles our best learning weapon - our powerful, innate skill-learning mechanisms, which thrive on SIMPLICITY. *The Golf Swing* combines two sciences: golf swing mechanics and human skill learning. The result is an approach to swing development based on just four movement skills - KEY SKILLS - each of which can be learnt using the simplest of swing

thoughts. In contrast to other books - which merely describe the swing - *The Golf Swing* explains the best way to learn it. Grounded firmly in high-quality science, yet written in a non-scientific, entertaining style, *The Golf Swing* cuts through the buzzing bewilderment that surrounds the golf swing. All golfers - from beginners to tournament professionals - will benefit. 'For any other human skill, we know we can do it, but we don't know how we do it. In the golf swing, it's the opposite - we know everything about how to do it, but we can't DO it'.
