Corporate Finance, by Ross, Westerfield, and Jaffe is a popular textbook that emphasizes the modern fundamentals of the theory of finance, while providing contemporary examples to make the theory come to life. The authors aim to present corporate finance as the working of a small number of integrated and powerful intuitions, rather than a collection of unrelated topics. They develop the central concepts of modern finance: arbitrage, net present value, efficient markets, agency theory, options, and the trade-off between risk and return, and use them to explain corporate finance with a balance of theory and application. The well-respected author team is known for their clear, accessible presentation of material that makes this text an excellent teaching tool. Brad Jordan, known for his successful work on the RWJ Fundamentals and Essentials books, contributed to this edition. His influence will be seen particularly in the writing style with smoother coverage of topics, and the increased quality in the problem material.

This volume will introduce the reader to basic topics of corporate finance. The notes will provide an integrative model that will help students evaluate projects, examine financing alternatives and assess a firm. With problems and detailed solutions at the end of each chapter, this volume will also greatly benefit financial managers and investors. Corporate finance is a discipline from the firm's perspective and addresses the concerns of the Chief Financial Officer of the firm. Additionally, investors need to understand why firms make certain decisions so that they better recognize what drives firm value. These lecture notes assume no previous knowledge of finance, and are written in conversational style that makes the topics more accessible and easy to comprehend and absorb.
