 Seminar paper from the year 2012 in the subject Economics - Economic Cycle and Growth, grade: A, Stanford University, language: English, abstract: This paper presents and discusses the Ford scenario in recession in the perspective of business economic theory. Economic theory is a broad concept for the explanation of the movement of goods in a market. Theoretical economic concepts have scientific backing or studies to prove or disprove a stated speculation. National governments also have an interest in theories of economics. Politicians swear on studies of government spending, money supply, tax collections, and consumer spending data to make laws or set policy. Dissimilar economic theories exist that focus on different aspects of government policy perspective economics. (Salvadori 2003) Ford Motor Company was shaped on superior products and that exists today. They have an exceptional line of trucks and cars which ranges from the Model-T to today's Ford Focus and F-Series, the excellent selling car and truck in the world. Their current product line is the strongest in their history and is getting stronger yet. (Collins 2007) This year they added the new Ford Explorer, Expedition and Thunderbird in North America, the new Lincoln Blackwood, Ford Fiesta in Europe and Navigator, Land Rover Freelander and Range Rover, Aston Martin Vanquish, Jaguar X-Type, Mercury Mountaineer, and the Mazda Sport Wagon. These vehicles will help to separate them from their competition. (Rosenberg 2012)

 Get Fords complete story in Ford Tough: 100 Years of Ford Trucks and see why they've dominated the truck market, selling 1.5 million trucks every year in the US alone. In July 1917 Ford Motor Company introduced a one-ton chassis for commercial trucks, marking what many historians feel was its official entry into the dedicated truck business. Sure, after-market pickup beds could be added to a Model T car to convert it to a pickup, but with the debut of the rugged Model TT truck chassis, Ford was firmly in the truck market. Eight years later, Ford introduced its first factory-produced pickup, a sturdy half-ton job the public loved. During the century that has passed since

that first Ford truck chassis, the F-series has become the best-selling truck in the world, and the best-selling vehicle of any type in America. Ford Tough: 100 Years of Ford Trucks tells the entire Ford truck story from the very beginning, when Ford got its start in truck production. This book provides the history of the wide array of models Ford has built over the past century, including the Model A roadster pick-up, stylish 81C pickups, legendary 1948 F-1, Bronco, Courier, Ranchero, and Econoline.

View or download the free 2014 Online Supplement for this product. This comprehensive casebook is intended for a broad survey course on commercial law. This edition includes transactions under the Convention of International Sales of Goods. This book is built around carefully selected and edited cases, author notes, and selected problems. Though including landmark cases, the authors emphasize cases decided since 1990. These newer cases offer both a more sophisticated discussion of problems than usually found in earlier cases, as well as more current analyses of Code ambiguities and conflicting approaches to certain Code sections. Each chapter begins with advice on reading the relevant sections of the UCC and Convention of International Sales of Goods, making the statutes more understandable for students. Major topics covered include Underlying Code Principles, Sales, Commercial Paper and Electronic Transfers, Banking and Bank-Customer Relations, Documents of Title, and Secured Transactions.

One of the leading casebooks in the field, *The Law of Debtors and Creditors* features 39 problem sets with realistic questions a lawyer considers in managing a bankruptcy case. It also challenges the students with the major policy and theoretical questions in the field. The text features a functional organization as a bankruptcy case would unfold. The focus is on teaching through the realistic problems, complete with ethical difficulties embedded into the fact patterns. The presentation is lively and colloquial. Explanatory text throughout makes bankruptcy law accessible to students and easier to teach. Because it divides the subject between consumer and business bankruptcy, professors can select the depth of coverage for each subject in designing a two-, three-, or four-credit class. The authors—Senator Elizabeth Warren, Congresswoman Katie Porter, and Professors Pottow (Michigan) and Westbrook (Texas)—are among the most prominent in the field. Uniquely comprehensive *Teacher's Manual*—chock full of material on how to design class around the problem sets, citations to new cases and literature, and suggestions for steering class discussion. This project contains a look into the manufacturing company of Ford Motor Company. Research was done about how the company runs business, both globally and domestically. In this report, the company's mission, goals, strategies, product and service portfolios, market share and profit performance, technology and employment information are outlined. Key successes and weakness failures are also discussed in detail. Information about Ford's use of computer systems and an information model for the company is also included. The information model displays Ford's Work System, showing which components of the Work Organization, Control System, Industrial Relations and Human Resources Practices Ford implements. The Business Organization, with Ford's Business Strategy and Enterprise Organization is also part of the model. At the end of the report, self-evaluations by team members and references can be found. Ford Motor Company is currently trying to increase its global market share in automobile sales while facing slumping market share numbers in the United States. This report examines the Ford company characteristics and how the company uses information systems in the business climate. To reduce costs and increase knowledge of a region Ford uses small ERP systems that are less expensive and faster to implement than the larger ERP systems. Failure to obtain a larger market share in foreign markets has hurt the company. The proper use of information systems by Ford will increase their ability to maintain a successful business in future years locally and globally.
