 Computers, communications, digital  
 information, software"the constituents  
 of the information age"are everywhere.  
 Being computer literate, that is technically  
 competent in two or three of today"s

software applications, is not enough anymore. Individuals who want to realize the potential value of information technology (IT) in their everyday lives need to be computer fluent – able to use IT effectively today and to adapt to changes tomorrow. *Being Fluent with Information Technology* sets the standard for what everyone should know about IT in order to use it effectively now and in the future. It explores three kinds of knowledge – intellectual capabilities, foundational concepts, and skills – that are essential for fluency with IT. The book presents detailed descriptions and examples of current skills and timeless concepts and capabilities, which will be useful to individuals who use IT and to the instructors who teach them.

 Infotech is a comprehensive course for learners at the intermediate level who need to be able to understand and use the English of computing for study or work. The course develops all four skills – listening, reading, speaking and writing – through a wide range of activities which present the key language and allow the learner to practice the most important

vocabulary and structures in a meaningful and student-centred way. Each of the 28 topic-based units covers a different aspect of information technology, from Operating systems to Input/Output devices for the disabled. The units contain a wealth of authentic texts which are up-to-date in their content. The cassette contains situational dialogues and presentations of computer technology to develop listening comprehension skills and build vocabulary.  
*Infotech* Cambridge University Press  
 This is a uniquely friendly and easy-to-understand treatment of the complex theories and findings that surround CMC. Communication is often complicated, and computerization makes it stranger still, yet the authors have deftly demystified both the miraculous and the mundane of computer-mediated interaction.

 This book presents the Proceedings of The International Science and Technology Conference “FarEastCon-2018,” which took place on October 2-4, 2018 in Vladivostok, Russian Federation. The conference provided a platform for accumulating expert opinion on projects and initiatives aimed at the

implementation of far-sighted scientific research and development, and allowed current scientific and practical achievements to be shared with wide circle of researchers. Featuring selected papers from the conference, the book is of interest to a broad range of experts involved in developing innovative solutions and organizing events that increase the efficiency of economic and innovative activities.

**Infotech Teacher's Book** Springer

This book is suitable for use in a university-level first course in computing (CS1), as well as the increasingly popular course known as CS0. It is difficult for many students to master basic concepts in computer science and programming. A large portion of the confusion can be blamed on the complexity of the tools and materials that are traditionally used to teach CS1 and CS2. This textbook was written with a single overarching goal: to present the core concepts of computer science as simply as possible without being simplistic.

Engaging topics, motivating role-plays,

and a variety of exercises provide a framework for each specialist subject. Tip boxes in each unit include key language points, useful phrases, and strategies. STARTER section at the beginning of each unit has warm-up and awareness-raising activities. OUTPUT sections at the end of each unit encourage discussion and reflection. Answers, transcripts, and a glossary of useful phrases at the back of each book. Self-study material on the interactive Multi-ROM includes realistic listening extracts and interactive exercises for extra practice.

Project brings English to life through motivating topics within a structured learning environment. It provides a clearly-structured, supportive framework of grammar with the flexibility to allow students to make their own discoveries. Language is presented in stimulating, realistic contexts. A high profile is given to skills development from the start of the course. Cross-curricular project work encourages students to communicate in English about their own lives and

experiences. The strong cultural element helps students to establish a connection between language and life. Students are encouraged to learn about life in Britain and other English-speaking countries, as well as to explore differences and draw comparisons with their own cultures. Strong emphasis is placed on learner independence: students are encouraged to think about their own learning and reflect on their progress. The course is enriched by numerous songs, games, and puzzles which make language learning fun. The fifth level, Project Plus, is a revision level with the emphasis on skills extension, in particular reading and speaking.

**Infotech Teacher's Book English for Computer Users**

Software Engineering: A Programming Approach provides a unique introduction to software engineering for all students of computer science and its related disciplines. It is also ideal for practitioners in the software industry who wish to keep track of new developments in the discipline. The third edition is an update of the original text written by Bell, Morrey and Pugh and further develops the programming approach taken by these authors. The new edition however, being updated by a single author, presents a more coherent and fully integrated text. It also includes recent developments in the field and new chapters include those on: formal development, software management, prototyping, process models and user interface design. The programming approach emphasized in this text builds on the reader's understanding of small-scale programming and extends this knowledge into the realm of large-

scale software engineering. This helps the student to understand the current challenges of software engineering as well as developing an understanding of the broad range of techniques and tools that are currently available in the industry.

Particular features of the third edition are:

- a pragmatic, non-mathematical approach
  - an overview of the software development process is included
  - self-test questions in each chapter ensure understanding of the topic
  - extensive exercises are provided at the end of each chapter
  - an accompanying website extends and updates material in the book
  - use of Java throughout as an illustrative programming language
  - consistent use of UML as a design notation
- Douglas Bell is a lecturer at Sheffield Hallam University, England. He has authored and co-authored a number of texts including, most recently, Java for Students.
